

WEIGHMASTERS HANDBOOK 2019

Version One - December 2019

WEIGHMASTERS GUIDE SHEET

Mission Statement

To develop and implement a programme to train Club Weighmasters to a credible standard, to satisfy the expectations of the New Zealand Sport Fishing Council (NZSFC) and clubs affiliated to said body, and also meet the requirements of the IGFA. This programme is to be updated on a regular basis to keep weighmasters up to a high standard of fish identification and weighing procedures. Weighmasters should always keep in mind that the weighstation is the front door to the Club.

Contents

Understanding why we need to be consistent with fish identification and procedures.

Learning the correct procedure for documentation in applying for records.

Understanding weighing equipment, scales and line tester's certification.

Regular updates and feed back to clubs and members of NZSFC regarding rules and regulations.

Keeping equipment up to standard including the weigh station. This includes catch cards, tags and scales certifications up to date, together with the weighmasters Kit Bag.

- Various tail ropes
- Knife, clippers, zip lock bags or envelopes for line tests or sampling
- Tape measure, measuring board
- Roll of insulation tape
- Catch cards arid pens
- Club membership forms
- Fish ID books and/orphotos
- Club Year Books and NZSFC Yearbook
- Chalk and/or white board pens
- General

Weighmasters should spend time concentrating on club public relations and have regular interaction with members relating to commonly used fishing techniques and indeed new techniques to keep anglers up to date with possible rule changes. This can be done with club education nights once or twice a year and, if necessary, bring in guest speakers.

When weighing fish during competitions make life easy for yourself by getting as much information as possible from the angler or skipper before the fish is brought to the weigh station. Ask that the angler has the catch card filled out before Weigh-in starts. Interact with the public and talk about the species, its features, any scaring, tags etc. Make sure you have references at your convenience in case you get in a bind over fish ID or rules.

Be consistent about decisions i.e. mutilation. Have on hand references to club and national records. Take time to measure and explain why you, as weighmaster, should check the gear, ropes, gaff length, tackle, rigs etc. Explain all of this to the spectators.

Above all, think how you as weighmaster can make the weigh-in a pleasurable experience for both the angler and spectators alike.

Warren Harris (Weighmaster/Tutor MBGFC)

November 2013

WEIGHMASTERS DUTIES

Make yourself familiar with the club, NZSFC & IGFA rules

Catch cards - Angler to complete, check details are correct

People to assist - If you need help at the weigh station then ask people to do so

Tail Ropes to weigh fish - Use correct size for the fish being weighed

Check Anglers Gear - NZSFC highly recommends that weighmasters inspect (and measure) all equipment used to capture the fish.

- Rod and Reel make sure rod is not broken
- Main line check there is at least 5m of the stated breaking strain line directly preceding the double line, leader, or hook. Also visibly check it's the line weight that the angler says it, if in doubt use a line tester to check
- Trace Leader/Double check leader/double length is correct for the line weight being used
- Hook arrangement Is it legal (no 3 hook rigs or double hooks used with skirted lures etc)
- Gaff/Net is it legal (max length 2.44m) Tag Pole is it legal (max length 3.66m)
- Choke or tail ropes, flying gaff ropes used during capture max length of 9.14m

Inspect Fish - Check for any recent wounds that may have occurred during the angling process, eg prop lacerations, shark bites etc.

Species Identification - If you're unsure then either involve others with more experience or just leave the species part blank until it's correctly identified at a later date.

Hanging or Platform scales? - fish type/length

- Turn on & wait for zero
- Attach tail rope or place tray on scales and "zero" the scales
- Weigh Fish & record weight
- Before weighing next fish check that scales have re-zeroed correctly. Wash any ropes, trays used during the process.

Catch Board - Ask the angler if they would like the catch board written up for photos, this also applies to all underweight Billfish.

NZ or **World records** - Many NZ or World records get missed, especially junior or smallfry records. Ultimately this is the angler's responsibility, however if you suspect it could be a NZ or World record check the current NZSFC yearbook/website or advise the angler to not cut the fish up until confirmed whether it is or not a record. There is a lot of paperwork, photos & measuring required for record applications, feel free to contact anyone else who has more experience to help the angler with this process.

WEIGHMASTERS RESPONSIBILITIES

- 1. The weighstations are the front door of every club. Their procedure and presentation reflect on their club as a whole.
- All weighing scales must have a current certification 12 months of the year. There is no given time when there may be a requirement to weigh a world or National record.
- All weighpersons must make themselves familiar with the operation of the scales they are using. Makes and brands of scales can and do vary from club to club.
- 4. A club must fish under NZSFC and IGFA rules, and regulations as well as their club rules. Weighpersons must make themselves familiar with these rules especially the tackle and species. They will be checking the leaders and the double line and making sure of the line weight and gaffs set down in the IGFA rules as well as species.
- 5. Weighpersons must check for any new wounds in the fish such as propeller or predator inflections etc. Any one of these injuries must be reported to the appropriate person or persons within the club for them to adjudicate over the legality of the catch. The only injury that is acceptable is the clean gaffing wound or wounds.
- 6. Weighpersons must have proof of NZSFC club membership before a courtesy weigh can be performed. There may be a club fee to pay before courtesy weighing. A non-member will be charged a fee before weighing any fish. Weigh persons must receive from the angler the filled in weigh/catch sheet before weighing the fish, to be completed with the weight and their signature verifying the weight after the fish is weighed by the weighperson.
- 7. Weighpersons must make sure that the scale is zeroed and witnessed by the angler or their representative before weighing the fish. Also, the angler or representative must be present to verify the weight of the fish when the weigh person has the final weight.
- 8. All fish must be hung by the tail prior to weighing. For consistency all marlin bills (mouths) must be taped before weighing.
- Fish can be weighed by the tail, in a cradle or on a flat platform. The weight of the cradle or tail rope must be deducted from the total weight or hung from the scales and then zeroed before weighing commences.
- 10. When weighing the fish other than on a platform, it must be allowed to totally settle to ascertain the correct weight. If the scales have a motion sensor this must be used.

- 11. Bait fish that are in the throat or the stomach of the fish are included in the weight of the fish.
- 12. The only weight that is recognised is the first weight of the fish on a recognised weigh station. Any other weight that may be established will not be recognised.
- 13. All lures and traces where practicable must be removed before weighing. Lures are not included in the weight.
- 14. Weigh persons must not get into consultation with the angler or the crew if there is any discrepancy with the fish or procedure required to weigh fish outside of these times.
- 15. Weighpersons must make themselves familiar with the presentation procedure for the identification of tagged and released fish. This may be different from club to club.
- 16. Weighpersons must make themselves familiar with the courtesy weighing requirements of their club. Two weigh sheets should be filled in, one for the club weighing the fish and one for the angler to take back to their club. (Council's policy is that all clubs must courtesy weigh for other affiliated clubs when required).
- 17. Weighpersons must use the IGFA and NZSFC yearbook for species identification for all fish. There are other publications that can be used for the same purposes.
- 18. All clubs must be a member of IGFA.
- 19. Each club will notify the NZSFC of their weighpersons each year.
- 20. Each club should notify its members and the NZSFC of their normal weighing hours.
- 21. Each club should notify its members and neighbouring clubs of their courtesy weighing requirements.
- 22. If in doubt on any detail seek assistance.

Notes for everyone

Recent wounds on a fish that have occurred while the fish is being angled such as shark bites or propeller wounds or anything else other than clean gaffing automatically disqualifies the fish as a mutilated catch.

If a weighperson has a concern over the line weight he/she must use the club's line tester to identify the breaking strain. It is in the interest of every club to have their own line tester.

The identified weight of a fish is the first time that it is weighed. No other weight that may be identified will be accepted.

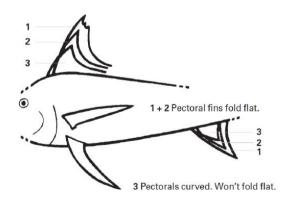

To avoid spoiled (decayed) fish they should be all weighed on the day of their catch. It is up to the individual clubs whether they make this mandatory or not.

ANGLERS, CREWS, BOAT OWNERS & CHARTER BOAT CAPTAIN'S RESPONSIBILITES WHEN THEY COME TO THE WEIGHT STATION

- Every angler, crew, boat owner and charter boat captain must make themselves totally familiar with the fishing rules and regulations set down by IGFA, NZSFC and individual clubs and their tournaments.
- 2. The weighperson is in charge of the weighstation. Anglers, crew, boat owners and charter boat captains are required to work in with the weighperson with the handling and the presentation for the weighing offish.
- 3. The angler must complete the weigh sheet other than the weight before presenting the fish to the weighperson.
- 4. If a fish has any new wounds other than the clean gaffing wound or wounds such as may be inflicted by a propeller or another predator this will disqualify the fish. If this fish is weighed in a mutilated condition it will not qualify for any IGFA, NZSFC, Club or tournament trophies or prizes.
- 5. Parties are requested to co-operate with the weighperson to check any relevant equipment related to this catch.
- The angler or their representative must be on hand to make sure the scales are zeroed before weighing the fish. Also, the angler or representative must be present to verify the weight of the fish when the weighperson has the final weight.
- 7. Parties are requested not to get into any consultation over any disagreement that may occur at the weighstation with the weighperson. Any disagreements should be taken to the appropriate person in charge of fishing regulations within the club for them to adjudicate over. When the weighperson is the weighmaster and judge they will then adjudicate on the IGFA and NZSFC fishing rules and regulations, along with any club and tournament rules that may apply.
- 8. Anglers are requested when courtesy weighing to adhere to the individual club's

- requirements, procedures and weighing times which may vary from club to club. Anglers must produce their club membership card or proof of membership before the fish can be courtesy weighed. There may be a courtesy weigh fee required by the club performing the courtesy weigh. Visiting anglers who are non-members will be charged a fee before weighing the fish. There should be two weigh sheets filled in for courtesy weighs, one for the club doing the courtesy weigh and one for the angler to take back to their own club. This is the angler's responsibility.
- Parties are requested to make themselves familiar with the weighing hours of the club and the procedure required to weigh fish outside of these times.
- 10. When parties wish to have the tag and release of a fish identified at the weigh station they must adhere to the protocol of the individual
- 11. Weighing of fish can be a joyous occasion with a little celebration going on before you get to the weigh station. Parties must appreciate that weighpersons have a big responsibility and not let their exuberance interfere with the serious procedure of weighing of the fish and the possible checking of the equipment and the fish.
- 12. The only weight that is recognised is the first weight of the fish on a recognised weigh station. Any other weight that may be established will not be recognised.
- 13. Tag cards must be checked when handed in. The minimum information required is date, location, species and estimation of size. Other information on the state of the fish's well-being is desirable.
- 14. Anglers and crew should co-operate with the Marine Biologists, Scientists and other Government Officials or Organisations in charge of science and research.

BILLFISH IDENTIFICATION

KEY

- Striped Marlin
- 2. Blue Marlin
- 3. Black Marlin

DORSAL FIN

- 1. About equal
- 2. About 2/3
- 3. About 1/2

ANAL FINS

Each species Similar proportion

FEATURES BILLFISH

STRIPED MARLIN

- sloped head slender -spear
- · high dorsel fin prominent lateral line
- flat relatively straight sided pectoral fins
- · moderately deep anal fin

BLUE MARLIN

- scooped head moderate heavy spear
- moderately high dorsel fin
- flat relatively straight sided pectoral fins
- deep anal fin

BLACK MARLIN

- humped head heavy spear
- low rounded dorsal fin
- curved pectoral fins that, in fish up to 60kgs may be movable but do not sit flat along body
- pectorals airfoil in section and curved in outline
- low anal fin

BROADBILL

- all fins rigid
- long flat sided sword
- curved pectorals

SAILFISH

- very high dorsal fin (sail)
- slender spear
- flat straight sided pectorals

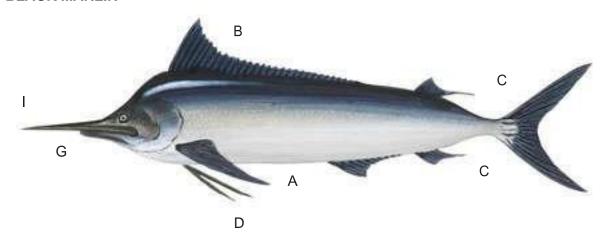

SPEARFISH

- relatively high dorsal
- short spear
- flat pectorals

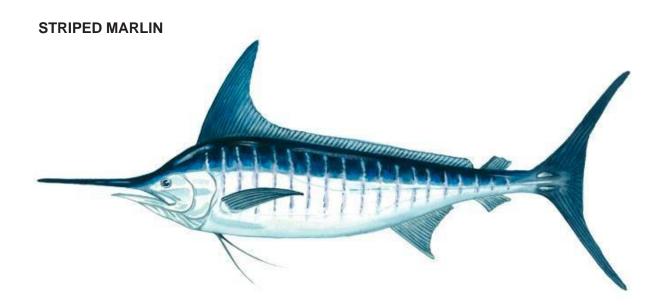

WHAT MARLIN ISTHAT?

BLACK MARLIN

BLUE MARLIN

FEATURE	BLACK MARLIN	BLUE MARLIN	STRIPED MARLIN
A. PECTORAL FINS	Rigid. Cannot be folded along the body (for fish over about 120kg). Curved like half sickle, aerofoil cross section.	Can be folded along body. Strap like, flat cross-section	Can be folded along the body. Strap like often "leaf" shaped. Flat cross section.
B. FIRST DORSAL FIN (WHEN FULLY ERECT)	Lowest of marlin, some- what rounded tip. Height about half body depth. Rarely has spots. Stout (fin rays are relatively thick). In fish less than 50kg, dorsal relatively high for much of its length	Intermediate (but obviously high). Height about two-thirds of body depth (about to level of origin of pectoral fin). Pointed tip, sometimes has numerous small spots. Stout (fin rays are relatively thick).	Highest of marlins. Height equal to, or just less than, body depth. Trailing edge more gradual than other two marlin, often resulting in rounded tip and "ragged" trailing edge. Relatively floppy (fin rays not stout).
C. SECOND DORSAL FIN & SECOND ANAL FINS	Second dorsal fin anterior to (in front of) second anal fin (measure as shown in accompanying figure).	Second dorsal fin posterior to (behind) second anal fin.	Second dorsal fin posterior to (behind) second anal fin.
D. PELVIC OR VENTRAL FINS	Very short. Less than 15% of lower jaw-fork length.	Moderately long 16-23% of lower jaw-fork length.	Long. 15-27% of lower jaw- fork length.
E. LATERAL LINES	Single obvious only in small (less than 25kg specimens).	Complex, but not visible. (if skin is cleaned & dried, lateral line shows as "chicken wire" shapes on the skin).	Often visible as a single line, esp in fish under about 80kg. Present in larger fish, but not always obvious.
F. SCALES	Scales relatively deep, but can be clearly seen	Very obvious just under the skin. Scales are nearly always exposed by skin breaking when handling	Scales not obvious (deep in skin). Not easily exposed by superficial abrasion of skin.
F. LOWER JAW	Short & "stocky" (like chickens beak). Often turned down at the tip.	Short & "stocky" (like chickens beak). Sometimes with downward turn at the tip.	Long and slender. Acutely pointed.
H. LENGTH RATIOS	% of eye-fork to lower jaw-fork lengths ranges be-tween 85-88%. Similar to blue marlin.	% of eye-fork to lower jaw-fork lengths ranges between 86-89%. Does not overlap with striped marlin.	% of eye-fork to lower jaw-fork lengths ranges between 82-86%. Does not overlap with blue marlin.
I. BILL	Stoutest of three marlins. Large sharp denticles over surface – can cause abrasive injuries when handling.	More slender than black, stouter than striped. Large sharp denticles over sur- face – can cause abrasive injuries when handling.	Slenderest of the three marlins. Very small denticles over surface – unlikely to abrade skin when handling.
J. BODY SHAPE	Oval in cross-section. Robust at level of pectoral fin, tapering gradually toward tail.	Over in cross-section. Usually heavier than striped marlin for any given body length	Slab-sided. Elliptical in cross-section. Weight per body length least of the three marlins
K. FLESH COLOUR	Pinkish white/grey	Pinkish white/grey	Mostly distinct orange colour (resembling smoked salmon).
L. COLOUR/ VERTICAL BARS	Many show bars when alive (esp juveniles), but disappear after death. Dorsal fin usually a distinctive mauve/pink in life. Body colour tends to a dull grey after death.	Show vertical bars when alive but disappear after death. Body colour becomes steely grey to very dark blue after death. Dark colour over whole body, including head. Light blue eye colour stands out.	Vertical bars in life and always visible after death. Whole body does not become dark after death. Belly usually retains creamy white colour.

BILLFISH

Shortbill spearfish - Tetrapterus angustirostris

Identifying characters

- Very short, stout bill (little overlap past lower jaw)
- Body very long, slender and laterally compressed
- Elongate, dark blue first dorsal fin, other fins are darker blue
- Dark blue dorsal region cleanly separated from silvery white sides and belly
- Not clearly marked with vertical bars or stripes
- Low sloping nape (between bill and first dorsal fin)

SHARK IDENTIFICATION

BLUE IN COLOUR

Mako

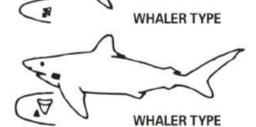

- · bullet head
- · upper and lower tail lobes almost equal
- · long gill slits
- · long awl teeth
- · short pectoral fin
- · keel on side of body near tail

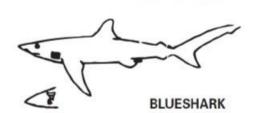

Blue Shark

- · pointed head
- · upper lobe of tail much longer than lower lobe
- · short gill slits
- · short wide serrated teeth
- very long pectoral fin its length equal to the length from the first gill slit to the tip of the nose

LARGE DARK-COLOURED EYES

White Pointer

- · bullet head
- · upper and lower lobes of tail almost equal
- · long gill slits
- · broad triangular serrated teeth
- · prominent keel on side of body near tail

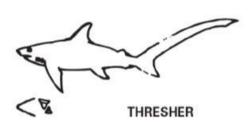

Tiger

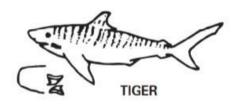

- · blunt head
- upper lobe of tail much longer than lower
- · short gill slits
- · curved cockscomb teeth
- · not true keel but low ridge

YELLOWISH CAT TYPE EYES

Whalers

- · upper lobe of tail is longer than lower
- · short gill slits
- first dorsal fin larger, second dorsal fin much smaller
- broad slightly serrated teeth in upper jaw, narrow slightly serrated teeth in lower jaw
- · head ranges from blunt to pointed

TUNA & MACKEREL IDENTIFICATION

edge

· yellow

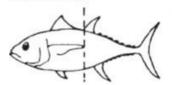

black

edge

No Scales.Prominent teeth.

ADULT TUNAS WITH SHORT SECOND DORSAL AND ANAL FINS

KEY

1. BLUEFUN TUNAS

Pectoral fin less than 80% of head length.

2. BIG EYE TUNA

Pectoral fin more than 80% of head length.

KAWA KAWA MACKEREL TUNA

- · wavy green lines on back
- · spots on belly

BONITO

· stripes on back

SHARK MACKEREL - SCALEY MACKEREL LARGE SCALE TUNA

· double lateral line

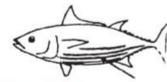

WAHOO

- · lower jaw longer than upper jaw
- · straight tail
- · no gill rakers on gills

NARROW BARRED MACKEREL

- · veed tail
- · upper jaw longer than lower
- · gillrakers on gills

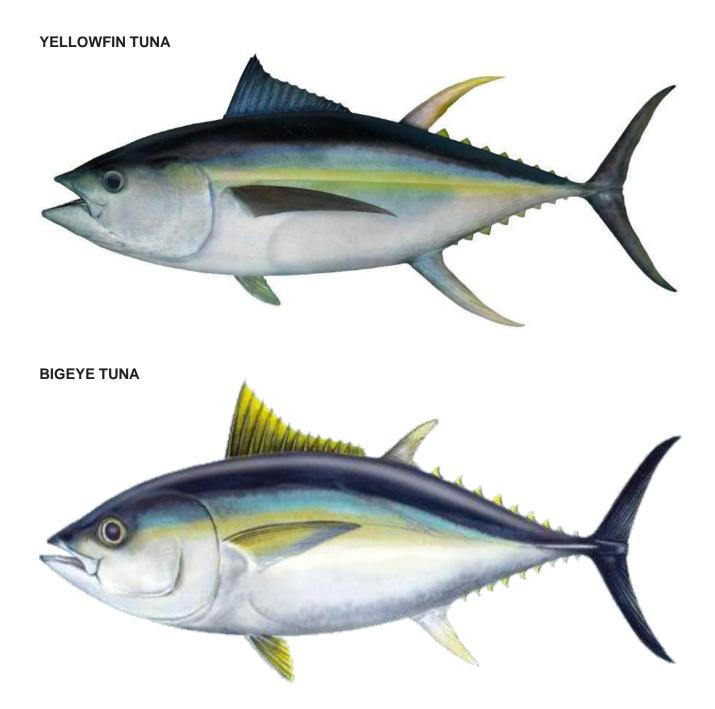

STRIPED TUNA SKIPJACK TUNA

· stripes on belly

DISTINGUISHING BIGEYE & YELLOWFIN TUNA

Two of the most difficult species of Tuna to tell apart, especially when small, are the yellowfin and bigeye tuna. This table summarises the principal differences between them at all sizes.

FEATURE	YELLOWFIN	BIGEYE
LIVER	Three lobes, one noticeably longer than other two. Bottom surface of the liver is a plain, uniform colour.	Three lobes of roughly equal length. Bottom surface streaked with many fine, blood-coloured lines, especially towards edge of middle lobe.
SWIM BLADDER	Small and not obvious. Only occupying about half of the body cavity ("above" the internal organs).	Large and obvious, occupying the full length of the body cavity.
COLOUR WHEN ALIVE	Metallic-black back, bright yellow band along body above silver/white sides and belly.	Dark blue/black back, blending to cobalt metallic-blue, to golden band above silvery / grey sides and white belly.
TAIL (ESPECIALLY FISH OVER 7KG)	Yellow / golden tinge. Middle part of trailing edge indented into a distinct "V", with raised ridges on either side.	Dark, showing little if any yellow. Dusky black after death. No distinct "V" at middle of tail. Pair or raised ridges absent.
TAIL (ESPECIALLY FISH OVER 7KG)	Yellow / golden tinge. Middle part of trailing edge indented into a distinct "V", with raised ridges on either side.	Dark, showing little if any yellow. Dusky black after death. No distinct "V" at middle of tail. Pair or raised ridges absent.
FISH 2 TO 5 KG	Many silvery oblique bands (striations) covering lower rear-half of body. Bands alternate between solid ones and lines consisting of rows of spots. Body relatively elongated and slim. Pectoral fin reaches to level of second dorsal fin, and is often rounded at tip.	Widely spaced, irregular vertical stripes, mostly solid, with darker areas in between. Head large compared with body. Body deep and rotund. The top and bottom edges from head to tail form continuous curves. Pectoral fin sharptipped, and as long or longer than yellowfin at this size.
FISH 10 TO 20 KG	Alternating bands of stripes and rows of spots still present, but wider apart than juveniles. Body still elongated, with the body profile between the second dorsal fin and the tail almost straight. Shape of pectoral fins from above blade-like, with tips pointing at about 45 degrees to line of body.	Vertical bands less distinct as fish grows, but still visible in live fish. Pectoral fins very long at this size, reaching the rear of the second anal fin. With a thin, flexible tip. Shape of pectoral fin from above is crescent-like, with the tips pointing to the rear.
FISH 21 TO 35 KG	Body still elongated, resulting in relatively small head compared with total length. Body striations now less obvious. Pectoral fin now relatively short and still. Second dorsal and anal fins ("sickles") begin to elongate.	Body is now very rotund (taking on the shape of a football). Head noticeably large, but relatively short tail "wrist". Pectoral fin still quite long. Importantly, second dorsal and anal fins remain short.
FISH 45 TO 70 KG	Body now more robust and barrel-shaped, but body, especially tail wrist, still elongated compared with bigeye. "Sickles" now quite elongated unlike any other tuna. Whitish patches still evident on rear third of underside.	Body very deep and even more "football" shaped, accentuating the relatively short tail-wrist. Large head compared with body is quite noticeable. Pectoral fin now much shorter and thicker. Very few, if any, markings on underside.
LARGER THAN 70 KG	"Sickles" greatly elongated, sometimes extended to the level of the tail tips.	Body very deep; head large, virtually no body markings.

EXTERNAL CHARACTERISTICS

Pectoral fin length and characteristics

YELLOWFIN (90cm)

- pectoral fin short, extending to base of second dorsal fin
- pectoral fin thicker, stiff, blade-like

BIGEYE (90cm)

- pectoral fin long, extending beyond the second dorsal fin base
- pectoral tapers to thin point, flexible, often curves ventrally at side

EXTERNAL CHARACTERISTICS

Pectoral fin characteristics

YELLOWFIN

• pectoral fin shorter, thicker, "blade-like" compared to bigeye

YELLOWFIN 104cm

BIGEYE 99cm

BIGEYE

• Pectoral fin longer, thinner, pointed attip

BIGEYE 96cm

YELLOWFIN 104cm

- Bigeye pectoral fin forms smooth arc with "floppy" tips.
- Yellowfin pectoral fins are straight and stiff.

EXTERNAL CHARACTERISTICS

Finlet Coloration

YELLOWFIN

• bright yellow with no black edging

BIGEYE

• yellowish colour edged with fine black line

INTERNAL CHARACTERISTICS

Liver morphology and appearance

Large, conspicuous organ along anterior, ventral portion of gut cavity

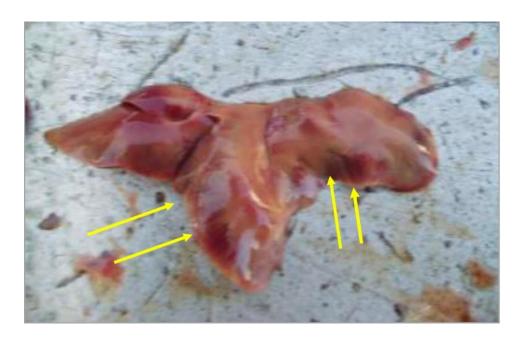

YELLOWFIN

• Right lobe longer and thinner than rounded medial and left lobes smooth, clear. No striations

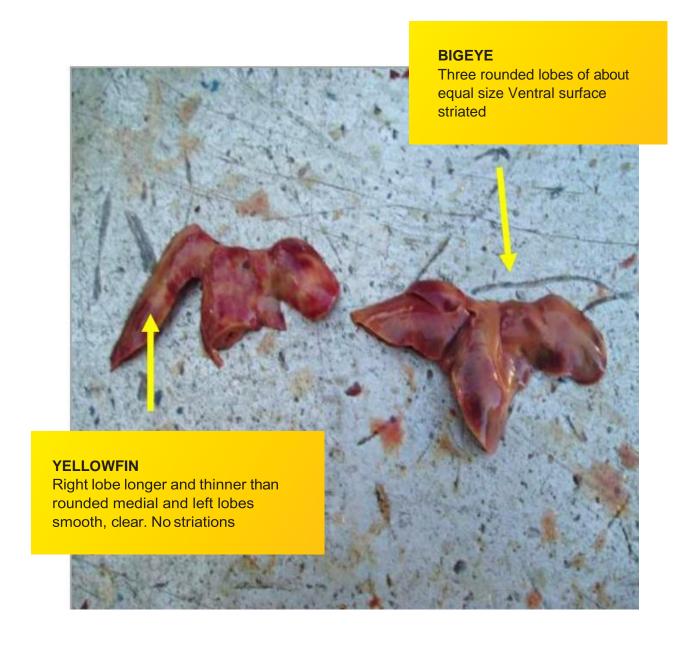

BIGEYE

• Three rounded lobes of about equal size Ventral surface striated

INTERNAL CHARACTERISTICS

Large, conspicuous organ along anterior, ventral portion of gut cavity (yellowfin and bigeye tuna 43 cm)

SOUTHERN BLUEFINTUNA

Southern Bluefin Tuna Identification

- 1. The pectoral fin of bluefin do not reach past the beginning of the second dorsal fin.
- 2. The silver underside of a bluefin's body is marked with white dots and uneven lines.
- 3. The second dorsal fin is a mix of grey and yellow in colour.
- 4. The tail fin is dark blue in colour.

Identifying features: Southern bluefin have a moderately long and muscular body with small scales covering skin. They are bluish black in colour along the back and silvery white below. Keels are present near the tail and are coloured yellow in juveniles and black in adults. Looks similar to bigeye tuna (Thunnus obesus) but fishers experienced in catching SBT will be able to identify distinguish bigeye by the larger shape of the eye and the chubby form of the fish.

TUNA - LIKE SPECIES

1. Slender tuna - Allothunnus fallai

Identifying characters

- Extensive gill raker system
- Short, pointed, pectoral fins relative to body size
- · Large eyes

2. Frigate tuna - Auxis thazard

Identifying characters

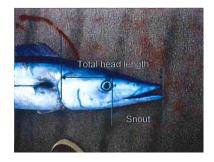

- Coloration: Head dark blackish purple fading to a blue coloured back. White ventral surface. Purple pectoral and pelvic fins with black innersides.
- At least fifteen wavy lines found in area above lateral line where no scales are present
- Corselet extends narrowly along lateral line with fewer than six scales deep below insertion of second dorsal fin
- Dorsal fins broadly separated (unlike kawakawa)
- Pelvic fins separated from one another by a large single flap (interpelvic process)
- Small, conical teeth found in a single series

3. Wahoo - Acanthocybium solandri

Identifying characteristics

- Many vertical bars along the body that may fade after death
- Nearly vertical trailing edge of caudal fin
- Close fitting, nearly triangular teeth
- The length of the snout makes up half of the total head length
- Distinctive dip in lateral line underneath (not after) the first dorsal fin

Snout and total head length

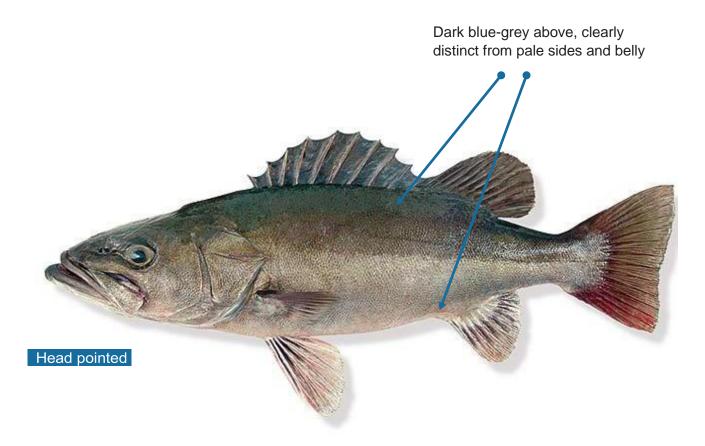

- Snout tip and jaw terminal, unlike barracuda and-Scomberomorus having extended lower jaw
- Extreme forking of caudal
 fin
- Prominent caudal keel flanked by two smaller keels on caudal fin base

HAPUKU

Polyprion Oxygeneios

Maori name : Haapuku

- Body Slender
- · Gill cover has horizontal ridge ending in a spine

Length: 70 – 90 cm, up to 150cm
Weight: 5 – 20 kg, up to 40 kg

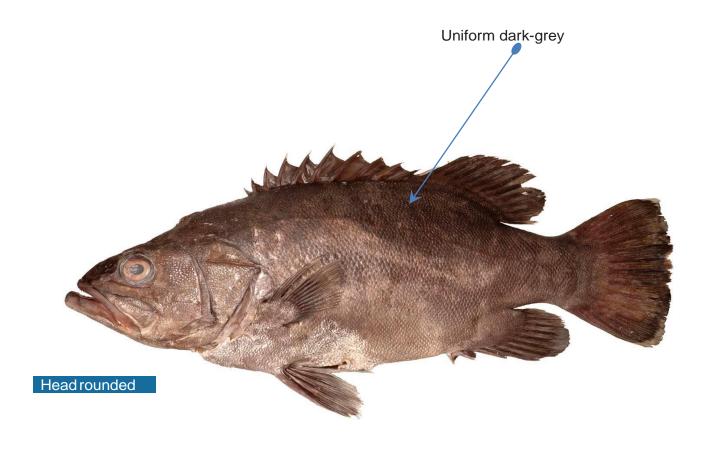

- A demersal species over the continental shelf and upper slope.
- Depth range: 5 500m, most common in 100 400m.
- Spawning occurs during winter.

BASS

Polyprion americanus

Maori name: Moeone

- Body deep
- · Gill cover has horizontal ridge
- Ending in a spine

Length: 70-100cm, up to 180cm
Weight: 5 – 30kg, up to 100kg

- A demersal species over the continental shelf and upper slope.
- Depth range: 50 800m, most common in 50 600m.
- · Spawning occurs during winter.

QUICK GUIDE TO DOUBLE/LEADER /EQUIPMENT LENGTHS

- If a top shot is used a minimum of 5m of main line directly preceding the double line, leader or hook.
- If using 10kg line & under the maximum length of the double line leader is 4.57m.
- If using 10kg and under the combined double line and leader length must not exceed 6.1m.
- If using 15kg line and over, the maximum length of the double line or leader is 9.14m.
- If using 15kg line and over, the combined double line and leader length is 12.19m.
- Max fixed gaff or net length 2.44m
- Max flying gaff rope / Tail rope / Choke rope length 9.14m
- Max tag pole length 3.66m

NZSFC FISHING RULES AND REGULATIONS - SEPTEMBER 2018

Contents

Section 1: Introduction

1.1 Understanding this document

This document contains the Angling Rules and Regulations for the New Zealand Sportfishing Council (NZSFC).

The basis of the rules is the International Game Fish Association International (IGFA) Angling Rules, which are set by IGFA. Where IGFA updates any rule, then that rule automatically supersedes the IGFA sourced wording within this document.

Within Section 2 of this document, the wording sourced from the IGFA Rules is shown as black text. NZSFC additions are shown in Section 2 are in red text. The combination of the two for NZSFC rules and regulations. Any angler wishing to fish strictly by IGFA rules only should refer to that set of rules (only).

NZSFC promotes Tagging and Releasing of Gamefish, and a number of additional NZSFC rules are applied to address this including the definition of when a fish is caught.

There are also other NZSFC rules and regulations added to this document that relate to New Zealand specifically, including alignment with NZ angling practices and fisheries management. These rules can only be amended at the NZSFC Annual General Meeting following constitutional requirements.

1.2 Records

There are records kept by IGFA (internationally), NZSFC and NZACA (NZ only). This document includes the IGFA rules. A full list of the IGFA record categories and requirements is available from IGFA.

This document includes a complete list of requirements/categories for NZSFC Records. NZSFC maintains NZ records for all NZ Anglers. Information regarding process and fees payable are included in Section 2.

1.3 NZSFC Awards and Trophies

NZSFC provide awards and trophies for members of NZSFC affiliated clubs.

1.4 General

As these IGFA fishing regulations are for world record claims, these rules have been extended by the NZSFC for better understanding to enable them to be more suited for club trophies and tournaments. Any club who is considering running a fishing tournament with high value prizes should extend these fishing rules further to cover any circumstances pertaining to their club and sponsors requirements.

These fishing rules and regulations must be used for NZSFC National Record Claims. These fishing rules and regulations must be used in the Annual NZSFC National Fishing

Tournament.

Any Club or organization using these Rules and Regulations do so at their own risk. The NZSFC does not accept any responsibility in the use of these rules and regulations in any other Tournaments.

Section 2: IGFA Rules including NZSFC additions

Note: In section 2 - Black Text are IGFA sourced Rules, NZSFC additions are shown in Red Text.

The following angling rules have been formulated by the International Game Fish Association to promote ethical and sporting angling practices, to establish uniform regulations for the compilation of world game fish records, and to provide basic angling guidelines for use in fishing tournaments and any other group angling activities.

The word "angling" is defined as catching or attempting to catch fish with a rod, reel, line, and hook, as outlined in the international angling rules. There are some aspects of angling that cannot be controlled through rule making, however. Angling regulations cannot ensure an outstanding performance from each fish, and world records cannot indicate the amount of difficulty in catching the fish. Captures in which the fish has not fought or has not had a chance to fight do not reflect credit on the fisherman, and only the angler can properly evaluate the degree of achievement in establishing the record.

Only fish caught in accordance with IGFA international angling rules, and within the intent of these rules, will be considered for world records. Following are the rules for freshwater and saltwater fishing and a separate set of rules for All-Tackle Length and Fly fishing.

RULES FOR FISHING IN FRESHWATER AND SALTWATER

(Also see Rules for Fly-fishing)

Equipment Regulations

A. LINE AND BACKING

- 1. Monofilament, multifilament, and lead core multifilament lines may be used. For line classes, see World Record Requirements.
- 2. Wire lines are prohibited.
- 3. The use of backing is permissible.
- 4. The catch shall be classified under the breaking strength of the first 16.5 feet (5 meters) of line directly preceding the double line, leader, or hook. This section must be comprised of a single, homogeneous piece of line.

B. DOUBLE LINE

The use of a double line is not required. If one is used, it must meet the following specifications:

- 1. A double line must consist of the actual line used to catch the fish.
- 2. Double lines are measured from the start of the knot, braid, roll or splice making the double to the farthermost end of the knot, splice, snap, swivel or other device used for securing the trace, leader, lure or hook to the double line.

Saltwater species: In all line classes up to and including 20lb (10 kg), the double line shall be limited to 15 feet (4.57 meters). The combined length of the double line and leader shall not exceed 20 feet (6.1 meters).

The double line on all classes of tackle over 20lb (10 kg) shall be limited to 30 feet (9.14 meters). The combined length of the double line and leader shall not exceed 40 feet (12.19 meters).

Freshwater species: The double line on all classes of tackle shall not exceed 6 feet (1.82 meters). The combined length of the double line and the leader shall not exceed 10 feet (3.04 meters).

C. LEADER

The use of a leader is not required. If one is used, it must meet the following specifications: The length of the leader is the overall length including any lure, hook arrangement or other device, and is measured to the bend of the last hook. The leader must be connected to the line with a snap, knot, splice, swivel or other device. Holding devices are prohibited. There are no regulations regarding the material or strength of the leader.

Saltwater species: In all line classes up to and including 20lb (10 kg), the leader shall be limited to 15 feet (4.57 meters). The combined length of the double line and leader shall not exceed 20 feet (6.1 meters).

The leader on all classes of tackle over 20lb (10 kg) shall be limited to 30 feet (9.14 meters). The combined length of the double line and leader shall be limited to 40 feet (12.19 meters). Freshwater species: The leader on all classes of tackle shall be limited to 6 feet (1.82 meters). The combined length of the double line and leader shall not exceed 10 feet (3.04 meters).

D. ROD

- 1. Rods must comply with sporting ethics and customs. Considerable latitude is allowed in the choice of a rod, but rods giving the angler an unfair advantage will be disqualified. This rule is intended to eliminate the use of unconventional rods.
- 2. The rod tip must be a minimum of 40 inches (101.6 cm) in length. The rod butt cannot exceed 27 inches (68.58 cm) in length. These measurements must be made from a point directly beneath the centre of the reel. A curved butt is measured in a straight line. When the rod butt is placed in a gimbal, the measurement from the centre of the reel seat to the pivot point of the gimbal can be no more than 27 inches. (The above measurements do not apply to surf casting rods).

E. REEL

- 1. Reels must comply with sporting ethics and customs.
- 2. Power driven reels of any kind are prohibited. This includes motor, hydraulic, or electrically driven reels, and any device, which gives the angler an unfair advantage.
- 3. Ratchet handle reels are prohibited.
- 4. Reels designed to be cranked with both hands at the same time are prohibited.

F. HOOKS FOR BAIT FISHING

- 1. For live or dead bait fishing no more than two single hooks may be used. Both must be firmly embedded in or securely attached to the bait. The eyes of the hooks must be no less than a hook's length (the length of the largest hook used) apart and no more than 18 inches (45.72 cm) apart. The only exception is that the point of one hook may be passed through the eye of the other hook. A hook may not precede bait, lure or bait/lure combo by more than one hook's length.
- 2. The use of a dangling or swinging hook is prohibited. Double or treble hooks are prohibited.
- 3. A two-hook rig for bottom fishing is acceptable if it consists of two single hooks on separate

- leaders or drops. Both hooks must be embedded in the respective baits and separated sufficiently so that a fish caught on one hook cannot be foul-hooked by the other.
- 4. A photograph or sketch of the hook arrangement must accompany all record applications made for fish caught on two-hook tackle.

G. HOOKS AND LURES

- 1. When using an artificial lure with a skirt or trailing material, no more than two single hooks may be attached to the line, leader, or trace. The hooks need not be attached separately. The eyes of the hooks must be no less than an overall hook's length (the overall length of the largest hook used) apart and no more than 12 inches (30.48 cm) apart. The only exception is that the point of one hook may be passed through the eye of the other hook. The trailing hook may not extend more than a hook's length beyond the skirt of the lure. A hook may not precede bait, lure or bait/lure combo by more than one hook's length. A photograph or sketch showing the hook arrangement must accompany a record application.
- 2 Gang hooks are permitted when attached to plugs and other artificial lures that are specifically designed for this use. Gang hooks must be free swinging and shall be limited to a maximum of three hooks (single, double, or treble, or a combination of any three). Baits may not be used with gang hooks. A photograph or sketch of the plug or lure must be submitted with record applications.
- 3. Assist hooks or other such single hooks that are attached to a lure with a lead constructed of monofilament, multifilament, wire or other such material must conform to the following: When using assist hooks on any artificial lure, other than a skirted lure, the lead cannot be more than 1½ hook's length and the bend of the hook may not be more than 4 inches (101 mm) whichever is less, from the closest point of attachment on the lure. Double and treble hooks may not be used as assist hooks.
- 4. Only one lure containing hooks may be used at a time.

H. OTHER EQUIPMENT

- 1. **Fighting chairs** may not have any mechanically propelled devices that aid the angler in fighting a fish.
- 2. **Gimbals** must be free swinging, which includes gimbals that swing in a vertical plane only. Any gimbal that allows the angler to reduce strain or to rest while fighting the fish is prohibited.
- 3. Gaffs and nets used to boat or land a fish must not exceed 8 feet (2.44 meters) in overall length. In using a flying or detachable gaff the rope may not exceed 30 feet (9.14 meters). The gaff rope must be measured from the point where it is secured to the detachable head to the other end. Only the effective length will be considered. If a fixed head gaff is used, the same limitations shall apply and the gaff rope shall be measured from the same location on the gaff hook. Only a single hook is permitted on any gaff. Choke ropes must not exceed 30 ft (9.14 meters) including the wire or chain on one end. Harpoon or lance attachments are prohibited. Tail ropes are limited to 30 feet (9.14 meters). (Once the catch is alongside and under control and the crew are unable to lift the fish on board, an anchor rope or block and tackle may be attached to the tail or gaff rope to bring the catch on board as long as the crew can verify it was not used in the fight of the fish). (When fishing from a bridge, pier or other high platform or structure, this length limitation does not apply).
- **4. Entangling devices,** either with or without a hook, are prohibited and may not be used for any purpose including baiting, hooking, fighting or landing the fish.
- 5. Outriggers, downriggers, spreader bars and kites are permitted to be used provided that the actual fishing line is attached to the snap or other release device, either directly or with some other material. The leader or double line may not be connected to the release mechanism either directly or with the use of a connecting device. Spreader bars are also acceptable when used strictly as a teaser.

- **6.** Daisy chains, birds, floats and similar devices may only be used if they do not unfairly hamper or inhibit the normal swimming or fighting ability of the fish, thereby giving the angler or crew an unfair advantage in fighting, landing or boating the fish.
- 7. A safety line may be attached to the rod, reel or harness provided that it does not in any way assist the angler in fighting the fish.
- 8. Tag poles must not exceed 12 feet (3.66 meters) in length.

ANGLING REGULATIONS

- 1. From the time that a fish strikes or takes a bait or lure, the angler must hook, fight, and land or boat the fish without the aid of any other person, except as provided in these regulations.
- 2. If a rod holder is used once the fish is hooked, the angler must remove the rod from the holder as quickly as possible.
- 3. In the event of a multiple strike on separate lines being fished by a single angler, only the first fish fought by the angler will be considered for a world record.
- 4. If a double line is used, the intent of the regulations is that the fish will be fought on the single line most of the time that it takes to land the fish.
- 5. A harness may be attached to the reel or rod, but not to the fighting chair. The harness may be replaced or adjusted by a person other than the angler.
- 6. Use of a rod belt or waist gimbal is permitted.
- 7. When angling from a boat, once the leader is brought within the grasp of the mate, or the end of the leader is wound to the rod tip, more than one person is permitted to hold the leader. Anyone assisting a shore-bound or wading angler must be within a rods length of the angler before touching the leader or netting or gaffing the fish.
- 8. One or more gaffers may be used in addition to persons holding the leader. The gaff handle must be in hand when the fish is gaffed
- 9. The angling and equipment regulations shall apply until the fish is weighed.
- 10. In the event of an angler wishing to re-use a successful lure on the same day, the leader must be cut on a 45 degree angle at the swivel top or loop end. Both pieces together with the rerigged lure must be presented to the weighmaster or judge that day.
- 11. Any catch will not be deemed to be complete until after the catch is weighed. In the event of a fish being tagged, the catch will be deemed complete when the tag is inserted in the fish. Subject to verification of weighing or releasing requirements.
- 12. When tagging a fish, the tag pole must be held at all times.
- 13. Only fish tagged with tags supplied or approved by Council will be recognised. Fish are tagged for the purpose of research.
- 14. Tag cards should be handed into weighmasters as soon as possible after the fish are tagged
- 15. Any fish tagged while still in the water should be alongside the boat and under control so the tag can be placed correctly.
- 16. The council strongly recommends that non off-set circle hooks be used when live baiting for any species. This will give fish a better chance of survival when tagged & released.

DEFINITION OF WHEN A FISH IS CAUGHT:

- 1. When landing or boating a fish the leader, if used, should be in hand before it is gaffed.
- 2. The catch will not be deemed caught until the fish is weighed. The intention is that all angling regulations & rules including equipment used to entice, hook, fight, land and secure the catch must comply with all IGFA International Angling Rules & NZSFC fishing rules until the fish has been weighed. Once a fish is gaffed it cannot be tagged and released.
- 3. In the event of a fish being tagged for releasing the leader should be in hand when the tag is inserted into the fish. When the tag is inserted the catch is deemed complete. The leader then can be intentionally cut as close to the fish as possible, or the hooks removed, or the fish releases itself.

- 4. In the event of a fish being released without tagging the fish is deemed caught and released when the leader is in hand and the leader is intentionally cut as close to the fish as possible, or the hook is removed.
- 5. A fish that has been tagged and the leader in hand still uncut and attached to the fish, may be gaffed and weighed if the angler considers that it is unlikely to survive or for any other reason. The tag must remain in the fish until it is weighed and then removed and returned to the tag card.
- 6. When fly fishing it is not necessary to have the leader in hand and when a fish is released without tagging the fish should be within tagging or gaffing distance when released

The following acts will disqualify a catch:

- 1. Failure to comply with equipment or angling regulations.
- 2. The act of persons other than the angler in touching any part of the rod, reel, or line (including the double line) either bodily or with any device, from the time a fish strikes or takes the bait or lure, until the fish is either landed or released, or in giving any aid other than that allowed in the rules and regulations. If an obstacle to the passage of the line through the rod guides has to be removed from the line, then the obstacle (whether chum, floatline, rubber band, or other material) shall be held and cut free. Under no circumstances should the line be held or touched by anyone other than the angler during this process.
- 3. Returning the rod to the rod holder, resting the rod in a rod holder, on the gunwale of the boat, or any other object while playing the fish. The rod being passed to the angler after the fish has taken the bait or lure.
- 4. Handlining or using a handline or rope attached in any manner to the angler's line or leader for the purpose of holding or lifting the fish.
- 5. Shooting, harpooning, or lancing any fish (including sharks and halibuts) at any stage of the catch.
- 6. Chumming with or using as bait the flesh, blood, skin or any part of mammals other than hair or pork rind used in lures designed for trolling or casting.
- 7. Using a boat or device to beach or drive a fish into shallow water in order to deprive the fish of its normal ability to swim.
- 8. Changing the rod or reel while the fish is being played.
- 9. Splicing, removing, or adding to the line while the fish is being played.
- 10. Intentionally foul-hooking a fish.
- 11. Catching a fish in a manner that the double line never leaves the rod tip.
- 12. Using a size or kind of bait that is illegal to possess.
- 13. Attaching the angler's line or leader to part of a boat or other object for the purpose of holding or lifting the fish.
- 14. If a fish escapes before gaffing, or netting, and is recaptured by any method other than as outlined in the angling rules.
- 15. Holding or touching an angler in a manner that assists them in fighting the fish or takes pressure off the angler. Touching or briefly holding the angler to prevent them from falling does not constitute a disqualification.
- 16. When live baiting and the deckhand or any other person other than the angler is holding the rod when the fish takes the bait.
- 17. If a fish escapes before gaffing, netting, tagging, or deliberately releasing it, it will be considered a free swimming fish and will not be regarded as a catch.
- 18. That any marlin or shark intentionally taken out of the water to be Tagged and released will be disqualified.
- 19. If the tag pole is used in a manner of a Harpoon, when tagging a fish or when it leaves the hand.

The following situations will disqualify a catch:

- 1. When a rod breaks (while the fish is being played) in a manner that reduces the length of the tip below minimum dimensions or severely impairs its angling characteristics.
- 2. Mutilation to the fish, prior to landing or boating the catch, caused by sharks, other fish, mammals, or propellers that remove or penetrate the flesh. (Injuries caused by leader or line, scratches, old healed scars or regeneration deformities are not considered to be disqualifying injuries). Any mutilation on the fish must be shown in a photograph and fully explained in a separate report accompanying the record application.
- 3. When a fish is hooked or entangled on more than one line.

RULES FOR FLY FISHING

Equipment Regulations

A. LINE

Any type of fly line and backing may be used. The breaking strength of the fly line and backing are not restricted.

B. LEADER

Leaders must conform to generally accepted fly fishing customs. A leader includes a class tippet and, optionally, a shock tippet. A butt or taper section between the fly line and the class tippet shall also be considered part of the leader and there are no limits on its length, material, or strength.

A class tippet must be made of non-metallic material and either attached directly to the fly or to the shock tippet if one is used. The class tippet must be at least 15 inches (38.10 cm) long (measured inside connecting knots). With respect to knotless, tapered leaders, the terminal 15 inches (38.10 cm) will also determine tippet class. There is no maximum length limitation. A shock tippet, not to exceed 12 inches (30.48 cm) in length, may be added to the class tippet and tied to the lure. It can be made of any type of material, and there is no limit on its breaking strength. The shock tippet is measured from the eye of the hook to the single strand of class tippet and includes any knots used to connect the shock tippet to the class tippet. In the case of a tandem hook fly, the shock tippet shall be measured from the eye of the leading hook.

C. ROD

Regardless of material used or number of sections, rods must conform and cast according to generally accepted fly fishing customs and practices. A rod shall not measure less than 6 feet (1.82 meters) in overall length and any rod that gives the angler an unsporting advantage will be disqualified. Overall butt length may not exceed six inches when measured from the centre of the reel foot to the end of the butt. Overall butt length for two-handed or spey rods longer than 11 feet may not exceed 10 inches when measured from the centre of the reel foot to the end of the butt.

D. REEL

The reel must be designed expressly for fly fishing. There are no restrictions on gear ratio or type of drag employed except where the angler would gain an unfair advantage. Electric or electronically operated reels are prohibited.

E. HOOKS

A conventional fly may be dressed on a single or double hook or two single hooks in tandem. The second hook in any tandem fly must not extend beyond the wing material. The eyes of the hooks

shall be no farther than 6 inches (15.24 cm) apart. Treble hooks are prohibited.

F. FLIES

The fly must be a recognized type of artificial fly, which includes streamer, bucktail, tube fly, wet fly, dry fly, nymph, popper and bug. The use of any other type of lure or natural or preserved bait, either singularly or attached to the fly, is expressly prohibited. Only a single fly is allowed. Dropper flies are prohibited. The fact that a lure can be cast with a fly rod is not evidence in itself that it fits the definition of a fly. The use of any lure designed to entangle or foul-hook a fish is prohibited. No scent, either natural or artificial is allowed on flies. The use of scented material in a fly is prohibited.

G. GAFFS & NETS

Gaffs and nets used to boat or land a fish must not exceed 8 feet (2.44 meters) in overall length. (When fishing from a bridge, pier or other high stationary structure, this length limitation does not apply). The use of a flying gaff is not permitted. Only a single hook is permitted on any gaff. Harpoon or lance attachments are prohibited. A rope or any extension cannot be attached to the gaff.

Angling Regulations

- 1. The angler must cast, hook, fight, and bring the fish to gaff or net unaided by any other person. No other person may touch any part of the tackle during the playing of the fish or give aid other than taking the leader for gaffing or netting purposes. Anyone assisting a shore-bound or wading angler must be within a rods length of the angler before touching the leader or netting or gaffing the fish.
- 2. Casting and retrieving must be carried out in accordance with normal customs and generally accepted practices. The major criterion in casting is that the weight of the line must carry the fly rather than the weight of the fly carrying the line. Trolling a fly behind a moving water craft is not permitted. The craft must be completely out of gear both at the time the fly is presented to the fish and during the retrieve. The maximum amount of line that can be stripped off the reel is 120 feet (36.57 meters) from the fly.
- 3. Once a fish is hooked, the tackle may not be altered in any way, with the exception of adding an extension butt. A harness cannot be attached to the fly rod.
- 4. Fish must be hooked on the fly in use. If a small fish takes the fly and a larger fish swallows the smaller fish, the catch will be disallowed.
- 5. One or more people may assist in gaffing or netting the fish.
- 6. The angling and equipment regulations shall apply until the fish is weighed.

The following acts will disqualify a catch:

- 1. Failure to comply with equipment or angling regulations.
- 2. The act of persons other than the angler in touching any part of the rod, reel, or line either bodily or with any device during the playing of the fish, or in giving any aid other than that allowed in the rules and regulations. If an obstacle to the passage of the line through the rod guides must be removed from the line, then the obstacle shall be held and cut free. Under no circumstances should the line be held or touched by anyone other than the angler during this process.
- 3. Resting the rod on any part of the boat, or on any other object while playing the fish.
- 4. Handlining or using a handline or rope attached in any manner to the angler's line or leader for the purpose of holding or lifting the fish.
- 5. Intentionally foul-hooking or snagging a fish.
- 6. Shooting, harpooning, or lancing any fish (including sharks and halibut) at any stage of the catch
- 7. Chumming with the flesh, blood, skin or any part of mammals.

- 8. Using a boat or device to beach or drive a fish into shallow water in order to deprive the fish of its normal ability to swim.
- 9. Attaching the angler's line or leader to part of a boat or other object for the purpose of holding or lifting the fish.
- 10. If a fish escapes before gaffing or netting and is recaptured by any method other than as outlined in the angling rules.
- 11. When a rod breaks (while the fish is being played) in a manner that reduces its length below minimum dimensions or severely impairs its angling characteristics.
- 12. When a fish is hooked or entangled on more than one line.
- 13. Mutilation to the fish, prior to landing or boating the catch, caused by sharks, other fish, mammals, or propellers that remove or penetrate the flesh. (Injuries caused by leader or line, scratches, old healed scars or regeneration deformities are not considered to be disqualifying injuries). Any mutilation on the fish must be shown in a photograph and fully explained in a separate report accompanying the record application.
- 14. Holding or touching an angler in a manner that assists them in fighting the fish or takes pressure off the angler. Touching or briefly holding the angler to prevent them from falling does not constitute a disqualification.

ALL-TACKLE LENGTH RULES

General Information

All fish entered for Length Records must be measured by anglers at the site of capture and released so that it swims away on their own and in good condition. Fish should be revived by moving it forward in the water to ensure a healthy release. Fish caught and entered for length records are not eligible for weighing and submission for other record categories.

Rules and Equipment Regulations

All IGFA rules and equipment regulations stipulated for fishing with conventional and fly tackle in fresh and saltwater shall apply with the exceptions below. All angling and equipment regulations shall apply until the fish is measured and released alive.

A. GAFFS & NETS

- 1. The use of gaffs to land fish is prohibited.
- 2. Nets used to boat or land a fish must not exceed 8 feet (2.44 meters) in overall length. (When fishing from a bridge, pier or other high stationary structure, this length limitation does not apply.)
- 3. The use of knotless, rubber coated nets or other similarly designed nets that minimize slime and scale removal is strongly recommended.

B. MEASURING DEVICE

- 1. All fish must be measured using an official IGFA measuring device.
- 2. The measuring device mat may be shortened by cutting it, but it may not be re-joined after it has been shortened.

Angling Regulations

The following acts will disqualify a catch:

- 1. Failure to comply with IGFA equipment or angling rules.
- 2. If the fish dies during the documentation process, or does not swim away on its accord after release

Length Record Requirements

All fish entered for Length Records are subject to the same requirements stipulated for other record categories with following additions and exceptions.

A. MEASURING REQUIREMENTS

- 1. Fish must be measured using an official IGFA measuring device on a flat surface.
- 2. The fish's snout must be touching the nose stop and free of lures or lifting devices.
- 3. With the fish lying on top of the measuring device, measurements will be taken from the most forward part of the fish's snout to the rear center edge of the tail.
- 4. All measurements will be made in centimeters.
- 5. Fish that measure between centimeter increments shall be recorded at the lower of the two increments. For example, a fish that measures between 45 and 46 centimeters will have a recorded length of 45 centimeters.

B. MINIMUM LENGTH REQUIREMENTS FOR VACANT RECORDS

Fish entered for vacant record categories must measure within the top half of that species maximum recorded length, as shown in the eligible species list.

C. MINIMUM LENGTH REQUIREMENTS NEEDED TO DEFEAT OR TIE EXISTING RECORDS

- 1. To defeat an existing record, the fish must measure at least two (2) centimeters longer than the existing record
- 2 A catch which matches the length of an existing record or exceeds the length by less than 2 centimeters will be considered a tie. In the case of a tie claim involving more than two catches, length must be compared with the original record (first fish to be caught). Nothing measuring less than the original record (first fish to be caught) will be considered.

D. PHOTOGRAPHIC REQUIREMENTS

Photographs included with applications must contain the following information.

- 1. The full length of the fish on the measuring device clearly showing the position of the mouth and tail. The fish may be held in position but must be done in a manner that does not obscure the view of the fish on the tape.
- 2. A close up showing the position of the fish's nose and tail on the measuring device.
- 3. The angler with the fish.
- 4. The rod and reel used to make the catch.

General Best Handling Practices

To remove your fish from the water to document it for record purposes, anglers should use either hands or a knotless, rubberized landing net to minimize slime and scale loss. Lip gripping devices may be used to help subdue fish. However, large fish should not be hoisted vertically out of the water, as this can cause damage to jaw muscle and bone as well as to internal organs. The best method for removing fish from the water by hand is to grip the fish or the lower jaw and support the fish's underside. Again, the point is always to hold fish horizontally and not vertically.

Documentation

IGFA records require pictures, measurement and/or weighing of the catch. All of this takes time, so you should have the necessary equipment ready before landing the fish. If the documentation process takes longer than several minutes, periodically place the fish back in the water or place in a live well to allow it to breathe.

Releasing

Considerable time and care should be exercised when releasing fish. Fish should be placed in the water and held by the base of the tail. If the fish is does not swim away from your grasp on its own, gently move it forward in the water to get water flowing over the gills. For best results, move the fish in the forward direction only instead of back and forth. A fish's gills somewhat resemble the pages of a book and are designed for water flow in only one direction. Moving the

fish in a slow circle or gently towing it behind the boat will accomplish this.

World Record Requirements

Game fish catches can only be considered for world record status if they are caught according to International Angling Rules. Following is information on world record categories, requirements, and procedures for filing claims. An application fee of \$50 US for members and \$80 US for non-members is required for each claim. All materials submitted become the property of IGFA.

World Record and NZ Record Categories

GENERAL INFORMATION

IGFA maintains world records for both freshwater and saltwater game fishes in all-tackle, all-tackle length, line class, tippet class and junior angler categories.

In order to qualify for a record, a catch must be a minimum of 1 pound (.453 kg) in weight and must outweigh the existing record by the required amount or meet the minimum weight requirements, if any, for vacant records. No applications will be accepted for fish caught in hatchery waters, sanctuaries or small bodies of water that are stocked with fish for commercial purposes. The intent of this rule shall prevail and IGFA retains the right to determine its applicability on a case by case basis. The catch must not be at variance with any laws or regulations governing the species or the waters in which it was caught.

When an additional species of game fish is made eligible for IGFA world records, the effective date will be announced. Fish caught on or after the effective date will be eligible for records. Announcement of an additional species in the World Record Game Fishes book or in other IGFA publications will be considered proper notification in lieu of any other notice.

If an angler submits more than one application for the same record, caught on the same day, only the heaviest or longest fish will be accepted.

If claiming a World Record (apart from Juniors & Smallfry) – only World Record Fees apply – it will automatically become a New Zealand record once ratified as a World Record. For Junior & Smallfry Records the lines need to be tested for NZ Records – just as long as it is caught on a line class that IGFA allows for the species and line weight used. IGFA have no line classes for Junior & Smallfry Records.

Where the current NZSFC recognized Line class exceeds the current IGFA line class, then that record shall stand for ongoing competition.

FISH SPECIES RECOGNISED BY NZSFC:

The NZSFC recognises all species of fish that IGFA recognise that can be caught in NZ waters, all line class species selected will be published in our yearbook, and all other species will be published on our website.

ALL-TACKLE CATEGORY

All-tackle world records are kept for the heaviest fish of a species caught by an angler in any line class up to 130 lb (60 kg). Fish caught on lines designed to test over the 130 lb (60 kg) class will not be considered for record claims.

All-tackle record claims are considered for all species of fish caught according to IGFA angling rules.

Applications for species not currently included in the IGFA line class and tippet class listings must meet the following criteria:

- 1. The fish must represent a valid species with a recognized scientific name.
- 2. The fish must be a species commonly fished for with rod and reel in the general area where the catch is made.
- 3. The fish must be identifiable based on photos and other supporting data presented with the application.
- 4. The fish must be considered "trophy-sized". A rule of thumb is that the weight must fall within the top half of the estimated maximum weight of the species.

ALL-TACKLE LENGTH CATEGORY

All-Tackle Length world records are kept for the longest of each eligible species caught by an angler in any line class up to 60 kg (130 lb) and released alive. Fish caught on lines designated to test over the 60 kg (130 lb) class will not be considered for record claims. All-Tackle Length record claims are only considered for the eligible species listed on page 184, caught according to IGFA angling rules.

NATIONAL LENGTH RECORDS

Any measuring devices approved by the NZSFC can be used. Any board other than the IGFA Board will not be allowed for World Records. There are only 5 species that IGFA currently recognise and they are albacore, kahawai, snapper, skipjack tuna and yellowtail kingfish.

Trevally, John Dory & Blue Cod are added for NZ purposes, plus any other species that the NZSFC so nominate from time to time.

Junior Angler Categories

Junior Angler world records are kept for the heaviest fish of the eligible species, in any line class up to 60 kg (130 lb) in smallfry and junior categories. Smallfry records are kept for both male and female anglers, ages 0-10. Junior records are kept for both male and female anglers, ages 11-16. Each species recognized for line class records and tippet class records is also recognized for Junior Angler records.

LINE CLASS & FLY ROD CATEGORIES

Line class records are kept according to the strength of the line. *Fly rod world records* are maintained according to tippet strength. Each species recognized for the line class records is also recognized for tippet records. Records are kept in the following line and tippet classes:

TIPPET CLASSES

Metric	US Customary
1 kg	2 lb
2 kg	4 lb
3 kg	6 lb
4 kg	8 lb
6 kg	12 lb
8 kg	16 lb
10 kg	20 lb
_	

LINE CLASSES

Metric	US Customary
1 kg	2 lb
2 kg	4 lb
3 kg	6 lb
4 kg	8 lb
6 kg	12 lb
8 kg	16 lb
10 kg	20 lb
15 kg	30 lb
24 kg	50 lb
37 kg 8	80 lb
60 kg	130 lb

With the exception of all-tackle claims, line classes are limited for many species.

NZSFC Line and Tippet Classes

Council has adopted all tippet and line classes as approved by the IGFA.

LINE TESTING

IGFA tests all line and tippet samples submitted with world record claims in accordance with the metric line class designations, which vary slightly from the standard US customary designations. For example, the US customary equivalent of 4 kilograms is 8.81 pounds. Thus, line designated by the manufacturer as 8 lb class line may test up to 8.81 pounds (4 kg) to qualify for an 8 lb line class record. The US customary equivalents in pounds for metric line classes are as follows:

Metric	US Customary Equivalent
1 kg 2 kg	2.20 lb 4.40 lb
3 kg	6.62 lb
4 kg	8.81 lb
6 kg	13.22 lb
8 kg	17.63 lb
10 kg	22.04 lb
15 kg	33.06 lb
24 kg	52.91 lb
37 kg	81.57 lb
60 kg	132.27 lb

Line and tippet samples submitted with record claims are uniformly tested in accordance with Government specifications, which have been modified and supplemented by IGFA.

Note: IGFA offers a line and tippet testing service for members only.

Record Catch Regulations

GENERAL INFORMATION

 Protested applications or disputed existing records will be referred to the IGFA Executive Committee for review. Its decisions will be final. IGFA reserves the right to refuse to consider an application or grant a claim for a record application. All IGFA decisions will be based upon the intent of the regulations.

- 2. Any and all claims and/or disputes regarding the IGFA International Angling Rules shall be governed by and construed and enforced in accordance with, the laws of the State of Florida, without regard to such jurisdiction's conflict of laws principles. In the event that the parties are unable to mutually resolve any dispute, controversy or claim arising out of, in connection with, or in relation to the IGFA International Rules, such dispute, controversy or claim shall be resolved by litigation; in that connection, each of the parties to such dispute hereby
- 3. (i) irrevocably and unconditionally consents to submit itself to the sole and exclusive personal jurisdiction of any federal or state court located within Broward County, Florida (the "Applicable Courts")
 - (ii) waives any objection to the laying of sole and exclusive venue of any such litigation in any of the Applicable Courts,
 - (iii) Agrees not to plead or claim in any such court that such litigation brought therein has been brought in an inconvenient forum and agrees not to otherwise attempt to deny or defeat such personal jurisdiction or venue by motion or other request for leave from any such court, and
 - (iv) agrees that it will not bring any action, suit, or proceeding in connection with any dispute, claim or controversy arising out of or relating to the Angling Rules in any court or other tribunal other than any of the Applicable Courts. Nothing in this Section shall prevent enforcement in another forum of any judgment obtained in the Applicable Courts. In the event that it shall become necessary for any party to take action of any type whatsoever to enforce the terms of the IGFA International Angling Rules, the prevailing Party shall be entitled to recover all its costs, including attorney's fees, costs, and expenses, including all out-of-pocket expenses that are not taxable as costs, incurred in connection with any such action, including any negotiations, mediations, arbitrations, litigation, and appeal.
- 4. When a substantial award is specifically offered for a world record catch in any line or tippet class, only a claim for an all-tackle record will be considered.
- 5. In some instances, an IGFA officer or member of the International Committee or a deputy from a local IGFA member club may be asked to recheck information supplied on a claim. Such action is not to be regarded as doubt of the formal affidavit, but rather as evidence of the extreme care with which IGFA investigates and maintains its records.
- 6. The IGFA will not recognise or approve any IGFA World Record application where a financial award is offered for obtaining the record.

NEW ZEALAND RECORD CLAIMS:

The Council will keep a Register of National records caught by its anglers

To qualify for New Zealand record claims:-

- 1. (a) Fish must be caught in NZSFC waters
 - b) All NZSFC fishing rules and angling regulations must be complied with at the time of catch
- 2. To qualify for New Zealand records, all claims must be in the hands of the NZSFC records officer within sixty (60) days of the catch.
- 3. New Zealand Sport Fishing Council adopt the IGFA minimum fish weight policy for the qualification of New Zealand record fishes, providing that fish meeting this minimum weight also exceed the minimum size regulations prescribed by the New Zealand Government
- 4. A sample of the line used must accompany the claim. NZSFC to follow the same line samples requirements as IGFA. The line sample must be supplied in a form that can be easily unrolled for testing without tangling. In regard to Braid or any other IGFA permitted type line, if two lines are attached then both must be submitted for testing.
- 5. The following photographs are required to accompany the claim:
 - (a) The full length of the fish, the rod & reel used to make the catch.
 - (b) The angler photographed with the fish.
 - (c) In the event of a Big Eye Tuna claim, a photo must also be submitted of the liver of the fish.

- (d) A photo of the fish lying on its side with a tape or rule laying alongside the fish.
- 6. All NZ Record Claims are open to all anglers in NZ. If the angler is not a member of a national body (NZSFC or Angling & Casting) at the time of capture there will be a fee of \$150 for the claim to be processed. If the angler is a non-member the fish will only qualify for a national record and no other trophies.
- 7. Anglers with disabilities claiming records Any angler with a disability will contest NZ records as listed. They may due to their disability make special procedures to enable them to angle a fish safely and mitigate a disability to enable them to fish. They will as far as physically possible fish within NZSFC and IGFA rules. Any departure from these rules is to be noted on the record application and the reason given. The award of the record in this special circumstance will need to pass the records officer requirements and assessment of a special panel of judges appointed from time to time by the Board. The record will be recorded in the appropriate category in the NZ records book.

SPECIES IDENTIFICATION

- Photographs must be submitted by which positive identification of the exact species can be made. Read the rules on photographs at the end of this section, and refer to the Species Identification section in the World Record Game Fishes book to determine which features must show to identify your fish. Applications without photographs will not be accepted.
- 2. If there is the slightest doubt that the fish cannot be properly identified from the photographs and other data submitted, the fish should be examined by an ichthyologist or qualified fishery biologist before a record application is submitted to IGFA. The scientist's signature and title (or qualifications) should appear on the IGFA application form or on a separate document confirming the identification of the species.
- If a scientist is not available, the fish should be retained in a preserved or frozen condition until
 a qualified authority can verify the species or until notified by IGFA that the fish need no longer
 be retained.
- 4. If no decision can be made from the photographs and the angler can provide no further proof of the identification of the species, the record claim will not be considered.

WITNESSES TO CATCH

On all record claims, witnesses to the catch are highly desirable if at all possible. Unwitnessed catches may be disallowed if questions arise regarding their authenticity. It is important that the witnesses can attest to the angler's compliance with the IGFA International Angling Rules and Equipment Regulations.

MINIMUM WEIGHT REQUIREMENTS FOR VACANT RECORDS

EFFECTIVE APRIL 1, 2017, IGFA WILL BE IMPLEMENTING MINIMUM WEIGHT REQUIREMENTS FOR LINE CLASS AND FLY ROD RECORDS AS OUTLINED BELOW.

(i) For line class categories up to and including 10 kg (20 lb) and all tippet class (fly rod) categories:

The weight of the catch must weigh at least ½ as much as the line class it is eligible for. For example, a fish entered for the 6 kg (12 lb) line class or tippet class category must weigh a minimum of 3 kg (6 lb 9 oz).

(ii) For all line class categories greater than 10 kg (20 lb):

The weight of the catch must be equal to, or greater than the line class it is eligible for. For example, a fish entered in the 24 kg (50 lb) line class category must weigh a minimum of 24 kg (52 lb 14 oz)

WEIGHTS NEEDED TO DEFEAT OR TIE EXISTING RECORDS

- 1. To replace a record for a fish weighing less than 25 pounds (11.33 kg), the replacement must weigh at least 2 ounces (56.69 gm) more than the existing record.
- 2. To replace a record fish weighing 25 pounds (11.33 kg) or more, the replacement must weigh at least one half of 1 percent more than the existing record. Ex: At 100 pounds (45.35 kg) the additional weight required would be 8 ounces (226.7 gm); at 200 pounds (90.71 kg) the additional weight required would be 1 pound (.453kg).
- 3. A catch which matches the weight of an existing record or exceeds the weight by less than the amount required to defeat the record will be considered a tie. In case of a tie claim involving more than two catches, weight must be compared with the original record (first fish to be caught). Nothing weighing less than the original record will be considered.
- 4. Estimated weights will not be accepted. (See Weighing Requirements.) Fractions of ounces or their metric equivalents will not be considered.

TIME LIMIT ON CLAIMS

With the exception of all-tackle records only, claims for record fish caught in US continental waters must be received by IGFA within 60 days of the date of catch. Claims for record fish caught in other waters must be received by IGFA within three months of the date of catch.

Claims for all-tackle records only are considered for catches made in past years if (1) acceptable photographs are submitted, (2) the weight of the fish can be positively verified, and (3) the method of catch can be substantiated. For catches made in the past, as much information as possible must be submitted on an IGFA world record application form with any additional substantiating data.

If an incomplete record claim is submitted, it must be accompanied by an explanation of why certain portions are incomplete. An incomplete claim will be considered for a record if the following conditions are met.

- 1. The incomplete claim with explanations of why portions are incomplete must be received by IGFA within the time limits specified above.
- 2. Missing data must be due to circumstances beyond the control of the angler making the record claim.
- 3. All missing data must be supplied within a period of time considered to be reasonable in view of the particular circumstances.

IGFA's Executive Committee will make final decisions on incomplete claims.

WEIGHING REQUIREMENTS

- 1. All record fish should be weighed on scales that have been checked and certified for accuracy by government agencies or other qualified and accredited organizations. Disinterested witnesses to the weight should be used whenever possible. All scales must be regularly checked for accuracy and certified in accordance with applicable government regulations at least once every twelve months. If at the time of weighing the fish the scale has not been properly certified within twelve months, it should be checked and certified for accuracy as quickly as possible. An official report stating the findings of the inspection prior to any adjustment of the scale must be included with the record application. A copy of the test certificate must be forwarded to the Secretary of the NZSFC before January 1 of each season.
- 2. The weight of the sling, platform, or rope (if one is used to secure the fish on the scales) must be determined and deducted from the total weight.
- 3. At the time of weighing, the actual tackle used by the angler to catch the fish must be exhibited to the weighmaster and the weight witness.
- 4. No estimated weights will be accepted. Fish weighed only at sea or on other bodies of water will not be accepted.

- 5. Only weights indicated by the graduations on the scale will be accepted. Visual fractionalizing of these graduations is not allowed. Any weights that fall between two graduations on the scale must be rounded to the lower of the two.
- 6. IGFA/NZSFC reserves the right to require any scale to be re-certified for accuracy if there are any indications that the scale might not have weighed correctly.
- 7. All fish must be weighed by the person/s nominated by the club as the weighmaster of the club or on scales for which a current certification of accuracy is available.
- 8. NZSFC Clubs should set their own rules to cover the trucking of fish to weigh stations within their own recognised waters.

Note: IGFA offers a scale testing service for members only.

Preparation of Claims

To apply for a world record, the angler must submit a completed IGFA application form, the mandatory length of line and terminal tackle (as described in following) used to catch the fish, and acceptable photographs of the fish, the tackle used to catch the fish, the scale used to weigh the fish, and the angler with the fish.

APPLICATION FORM

The official IGFA world record application form or a reproduction must be used for record claims. This form may be reproduced as long as all items are included.

The angler must fill in the application personally. IGFA also recommends that the angler personally mail the application, line sample or fly leader and photographs.

When making any record claim, the angler must indicate the specified strength of the line or tippet used to catch the fish. In the cases of line class and tippet class records, this will place the claim in an IGFA line or tippet class category (see World Record Categories). All lines will be examined by IGFA to verify the specified strength of the line. If the line or tippet over tests its particular category, the application will be considered in the next highest category; if it under tests into a lower line or tippet class category, the application will not be considered for the lower line class. The heaviest line class permitted for both freshwater and saltwater records is 60 kg (130 lb) class. The heaviest tippet class permitted for fly fishing records is 10 kg (20 lb). If the line or tippet over tests these maximum strengths, the claim will be disallowed.

Extreme care should be exercised in measuring the fish as the measurements are often important for weight verification and scientific studies. See the measurement diagram on the record application to be sure you have measured correctly.

The angler is responsible for seeing that the necessary signatures and correct addresses of the boat captain, weighmaster and witnesses are on the application. If an IGFA officer or representative, or an officer or member of an IGFA club is available, he or she should be asked to witness the claim. The name of a boatman, guide, or weighmaster repeated as witness is not acceptable.

The angler must appear in person to have his application notarised. In territories where notarization is not possible or customary, the signature of a government commissioner or resident, a member of an embassy, legation or consular staff or an IGFA officer or International Committee member may replace notarization.

Any deliberate falsification of an application will disqualify the applicant for any future IGFA world record, and any existing records will be nullified.

The IGFA will not recognise or approve any IGFA World Record application where a financial award is offered for obtaining the record

LINE OR TIPPET SAMPLE

All applications for fly fishing records must be accompanied by the lure, the entire tippet, and the entire leader along with one inch of the fly line beyond the attachment to the leader. These components must be intact and connected.

All other applications must be accompanied by the entire leader, the double line, and at least 50 feet (15.24 meters) of the single line closest to the double line, leader or hook. All line samples and the leader (if one is used) must be submitted in one piece. If a lure is used with the leader, the leader should be cut at the eye attachment to the lure.

Each line sample must be in one piece. It must be submitted in a manner that it can be easily unwound without damage to the line.

A recommended method is to take a rectangular piece of stiff cardboard and cut notches in two opposite ends. Secure one end of the line to the cardboard and wind the line around the cardboard through the notched areas. Secure the other end, write your name and the specified strength of the line on the cardboard. Any line sample submitted that is tangled or cannot be easily unwound will not be accepted.

PHOTOGRAPHIC REQUIREMENTS

Photographs showing the full length of the fish, the rod and reel used to make the catch, and the scale used to weigh the fish must accompany each record application. A photograph of the angler with the fish is also required.

For species identification, the clearest possible photos should be submitted. This is especially important in the cases of hybrids and fishes that may be confused with similar species. Shark applications should include a photograph of the shark's teeth, and of the head and back taken from above in addition to the photographs taken from the side. Whether the shark has or does not have a ridge between the dorsal fins should be clearly evident in this photograph.

In all cases, photographs should be taken of the fish in a hanging position and also lying on a flat surface on its side. The fish should be broadside to the camera and no part of the fish should be obscured. The fins must be fully extended and not obscured with the hands, and the jaw or bill clearly shown. Avoid obscuring the keels of sharks and tunas with a tail rope.

When photographing a fish lying on its side, the surface beneath the fish should be smooth and a ruler or marked tape placed beside the fish if possible. Photographs from various angles are most helpful. An additional photograph of the fish on the scale with actual weight visible helps to expedite the application.

Photos taken by daylight with a reproducible-type negative film are highly recommended if possible.

Note: IGFA's bimonthly newsletter International Angler keeps anglers up to date on world record catches.

It is important that we have clear, publishable photographs of the fish and the angler. If you have action shots of the catch, we would like to see them also.

Conversion Formulas for Weights & Measures

Persons submitting world record and contest claims are required to provide the weights and measurements of the fish in the units in which they were taken. The following formulas are provided for your information.

WEIGHTS		28.349	=	
Ounces	X	0.02835	=	Grams
Ounces	X	453.59	=	Kilograms

Section 3: NZSFC Regulations

These NZSFC regulations are provided to address New Zealand specific practices.

3.1 SPORT NZ (formerly SPARC)

Appeals can be taken to the Sports Tribunal in respect of disciplinary matters or breaches of NZSFC fishing rules and regulations. Any appeals must be submitted within 28 days

3.2 NZSFC FISHING WATERS

To be eligible for NZSFC Awards/Trophies or New Zealand Records fish must be caught in the waters within 200 miles of the coasts of the two main islands of New Zealand including the Chatham Islands

3.3 CATCH SUMMARY SHEETS:

These must be completed and sent to the Council Secretary on a regular basis. They should include all fish weighed by the Club and all Tag Cards handled by the Club.

3.4 IGFA & NZSFC RULES

- a) When clubs are conducting their own tournaments and visiting clubs are involved, they must make their own rules of entry.
- b) When members of unincorporated clubs are entering the Nationals and fishing for Council trophies they must prove they are a separate club in their own right and not part of another club
- c) Clubs may conduct fishing tournaments for sustenance reasons without complying with NZSFC fishing rules and regulations (Section 7.5 of the constitution refers). Fish caught for these reasons will not qualify for any present Council awards or prizes.

3.5 COURTESY WEIGHING:

- a) All clubs are required to courtesy weigh fish (at no charge) for anglers of affiliated clubs within the recognised hours of the weigh stations operation of the club. A fee may only be charged to non-affiliated fishers requesting a courtesy weigh. Clubs intending to charge for courtesy weighs for non-affiliates must advise Council of their intention and the fee to be charged at the beginning of the season.
- b) Anglers requiring a courtesy weigh or courtesy Tag & Release must present two completed weigh sheets / catch cards to the weighmaster (either on sheets / cards from the club providing the courtesy weigh, or their own club's sheets / cards prior to the fish being weighed. For Tag & Release, the weighmaster shall sight and check the completed Tag Card. The weighmaster shall retain / forward the Tag.

All club weigh sheets/catch cards shall have three additional tick boxes easily distinguishable near the particular Club's heading.

- i. Courtesy Weigh non-member
- ii. Copy
- iii. Courtesy Weigh NZSFC Affiliated Member. There shall be a line beside this box (suitably headed) to record the fishers Club and Membership No
- c) When a fish is courtesy weighed the fish will be accredited for statistical purposes to the angler's club.
 - i.An inland club can negotiate with a coastal club to use their facilities as a satellite weigh station. This must be notified to the NZSFC Secretary. The tally goes to the inland club and the coastal club must be aware they can't count them in their own tally as well.
- d) The recognition of the angler weighing this fish is at the discretion of the anglers club.
- e) Courtesy weighs must be used where practical to ensure fish are recorded to the weigh stations within the area of catch.

3.6 PERMANENT WEIGH STATIONS:

As included with Club information in the NZSFC Yearbook.

3.7 CATCH FLAGS:

Catch flags are a symbolic and optional gesture to communicate a boat's catch.

ALBACORE
BROADBILL
MARLIN
TUNA
SHARK
YELLOWTAIL KINGFISH
WAHOO
White Flag with Red Fish
Yellow flag with Black fish
White Flag with White Fish
White Flag with Blue Fish
White Flag with Green Fish
White Flag Orange Fish

OTHER SPECIES Yellow Flag
TAGGED FISH Red with White T

Generally these flags measure 70 cm x 35 cm

Individual Club's should make their own arrangements with regard to the flying of flags whilst playing a fish.

3.8 MARLIN

a). It is recommended for all clubs affiliated to the NZSFC that the minimum weight for marlin is 90kg. The minimum weight should apply for award or contest purposes and is recommended as a guide to encourage tagging of marlin, with the exception of b) below.

It should not discourage any marlin landed being weighed even if it is assessed as being under the recommended 90 kg weight. All marlin presented to a club for weighing should be recorded and details forwarded to the NZSFC for statistical recording purposes.

- b). All club, NZ or world record claims will be recognised regardless of marlin weight if ratified.
- c). The NZSFC is to seek and provide regular information to clubs on tagging of marlin. This should include recommended techniques and equipment to enhance the initial placement of tags, the recovery of the fish and ultimately improved recapture rates of tagged marlin.

3.9 Sharks

White Sharks are now protected in New Zealand so the records we have are 'historical' only. No Awards will be given.

3.10 Tagging Programme

Species in the tagging programme:

- Broadbill
- All marlin species (excluding spearfish)
- Blue and Mako sharks
- Yellowtail Kingfish Kingfish in particular should be measured before letting them go
- Tuna

Tags (each) \$4.14 inclusive of GST
 Tags – Nylon (Billfish) \$4.14 inclusive of GST

For non-members the cost for tags will be double

3.11 New Zealand Sport Fishing Council Calendar

Last 8 days in February ending on the last Saturday NZSFC Nationals

1st July each year Fish Tallies

Membership Details

Total number of members as at 30th June

7th July each year Final day for Nominations for Council Trophies

Apart from the first marlin weighed and tagged when the weigh sheet must be faxed within 24

hours of the fish being weighed or tagged

30th December each year Last day for payment of affiliation fees

Last day for Scales Certificates

Section 4: Awards and Trophies

4.1 Requirements for TROPHIES & AWARDS

To qualify for NZSFC Trophies:-

- 1. Fish must be caught in NZSFC waters
- 2. All NZSFC fishing rules and angling regulations must be complied with at the time of the catch
- All anglers must be financial members of Clubs affiliated to the NZSFC at the time of capture.
 For the Photo competition the photographer must be a financial member of a Club
 affiliated to the NZSFC. Photos become the property of the NZSFC and can be used in
 whatever publications they so choose.
- 4. With the exception of the first marlin of the season trophies, nominations must be received by the Secretary no later than July 7 each year. With regard to the First Marlin these nominations must be notified to the Council Secretary by faxing or emailing the weigh sheet within 24 hours of the fish being weighed or tagged.
- 5. For each Annual Trophy, NZSFC will present a suitable miniature which will NOT include

Council plaques.

- 6. Judging of the Old Man and the Sea Cup will be by such persons as the Board decide
- 7. Weighed marlin must exceed 90 kg
- 8. Nominations for trophies and awards must come from Clubs
- 9. A Club may put in more than one nomination

4.2 RECOMMENDATION TO CLUBS FOR RECORD PIN AWARDS:

(NB This recommendation is for those Clubs who award Pins)

For a New Zealand Record a Silver Pin with a Ruby coloured Eye For a World Record a Gold Pin with a Ruby coloured Eye

Clubs to make their own arrangements regarding purchase and distribution of these pins at their own cost.

4.3 GRAND SLAM CLUBS:

The NZSFC has introduced grand slam clubs for its anglers fishing in New Zealand. They are unique to New Zealand and serve as a supreme award for a lifetime of angling. To qualify for a slam club an angler must catch one of each type specified for each of the awards and meet the minimum weight requirements for each fish. All fish to be eligible to qualify towards your grand slam must be caught in accordance with angling rules for IGFA and NZSFC. You must have proof of capture (certificate, club yearbook, or photo of your fish with weigh board information included). All claims must be endorsed and verified by your club secretary. Your club must have been affiliated at the time of capture. These are lifetime awards and retrospective captures count provided the requirements are met. There are 5 different slam clubs.

THE BILLFISH SLAM STRIPED BLUE BLACK BROADBILL SPEARFISH	Minimum Weights 100 kg 150 kg 150 kg 110 kg 10 kg
THE SHARK SLAM THRESHER WHALER MAKO HAMMERHEAD BLUE	120 kg 120 kg 160 kg 100 kg 100 kg
THE TUNA SLAM YELLOWFIN BIGEYE BLUEFIN ALBACORE SKIPJACK	35 kg 25 kg 100 kg 10 kg 5 kg

Tuna slams claims the fish must also exceed the line weight.

THE INSHORE SLAM

SNAPPER	10 kg
KINGFISH	25 kg
KAHAWAI	3 kg
TREVALLY	5 kg
JOHN DORY	2 kg

The Inshore Slam includes a land-based section

THE SOUTHERN SLAM

BLUE SHARK 50 kg
PORBEAGLE 80 kg
MAKO 150 kg
THRESHER 130 kg

ALBACORE exceed line weight
SLENDER exceed line weight
KINGFISH exceed line weight
TUNA's (Northern Pacific or Southern Bluefin) exceed line weight

BILLFISH 90 kg

Catch 6 of the 8 fish to claim the Grand Slam

These fish must be caught in the South Island fishing grounds Any meritorious fish caught ie World Record, unusual fish of note, be considered by Council on a one-off basis to count towards part of the slam.

This came into effect 1 July 2010

BILLFISH TAGGING SLAM

STRIPED MARLIN BLUE MARLIN BLACK MARLIN BROADBILL SPEARFISH

To qualify the following criteria will apply;

- a) All fish must be caught and tagged in New Zealand Waters
- b) The slam must be applied for, the application must be endorsed and verified true and accurate by the club secretary whom the applicant belongs to and endorsed by the appropriate Fishing Committee (if applicable) of that club.
- c) Proof will be by an official catch card recognized by the NZSFC, by verification from a club year book or magazine. The club must have been affiliated to the NZSFC at the time of capture.
- d) IGFA & NZSFC rules are to be observed.
- e) A plaque or certificate will be issued if the slam is awarded.
- f) The recipient is to be honoured in the Council's annual yearbook.

To apply send details of your qualifying fish to the NZSFC secretary at PO Box 54242 The Marina Auckland 2144. Enquiries can be made to secretary@nzsportfishing.org.nz

ILLUSTRATED GUIDE TO EQUIPMENT REGULATIONS

DOUBLE LINES AND LEADERS

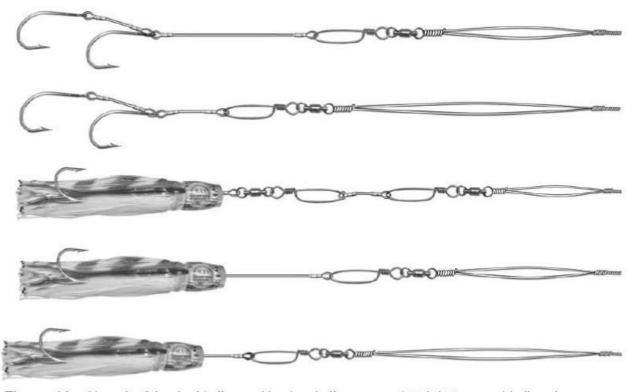

Double lines are measured from the start of the knot, braid, roll or splice making the double line to the farthermost end of the knot, splice, snap, swivel or other device used for securing the trace, leader lure or hook to the double line. A double line must consist of the actual line used to catch the fish. For saltwater species, the double line shall be limited to 15 feet (4.57 meters) for all line classes up to and including 20 lb (10 kg); and shall be limited to 30 feet (9.14 meters) for line classes over 20 lb (10 kg). For freshwater species, the double line on all classes of tackle shall not exceed 6 feet (1.82 meters).

The leader shall be limited to 15 feet (4.57 meters) for saltwater species in line classes up to and including 20 lb (10 kg), and 30 feet (9.14 meters) for all line classes over 20 lb (10 kg). For freshwater species, the leader on all classes of tackle shall be limited to 6 feet (1.82 meters).

The length of the leader is the overall length including any lure, hook arrangements or other device.

The combined length of the double line and leader shall not exceed 20 ft (6.1 meters) in line classes up to and including 20 lb (10 kg) and 40 feet (12.19 meters) in line classes over 20 lb (10 kg) for saltwater species. The combined length of the double line and leader shall not exceed 10 feet (3.04 meters) for freshwater species.

ILLUSTRATED GUIDE TO HOOK REGULATIONS NATURAL BAITS AND ARTIFICIAL

LEGAL if eyes of hooks no more than 18 inches (45.72 cm) apart in baits and no more than 12 inches (30.45 cm) apart in lures. ILLEGAL if eyes further apart than these distances.

LEGAL as eyes of hooks are no less than a hook's length apart and no more than 12 inches (30.45 cm) apart, and the trailing hook does not extend more than a hook's length beyond the skirt.

NOT LEGAL as the second or trailing hook extends more than the hook's length beyond skirt. See also two hook rigs.

LEGAL as hook is contained within the skirt.

NOT LEGAL in bait or lures as eyes of hooks are less than a hook's length (the length of the largest hook) apart.

NOT LEGAL as the single hook extends more than its length beyond the skirt.

LEGAL as eyes of hooks are no less than a hook's length apart and no more than 18 inches (45.72 cm) in baits and 12 inches (30.45 cm) in lures.

NOT LEGAL as back hook is not firmly imbedded in or securely attached to bait and is a dangling or swinging hook.

LEGAL in baits and lures. The point of one hook is passed through the eye of the other hook.

LEGAL as both hooks are firmly imbedded or securely attached to bait. Would not be legal if eyes of hooks were more than 18 inches (45.72 cm) apart.

Flying Gaffs - LEGAL on boats if effective rope length does not exceed 30 feet (9.15 meters).

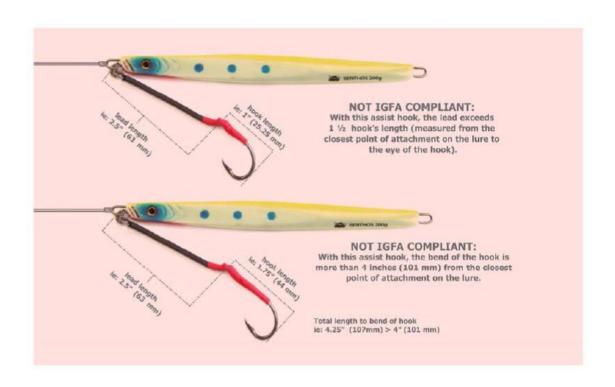

Flying Gaffs - LEGAL on boats if overall gaff length does not exceed 8 feet (2.44 meters).

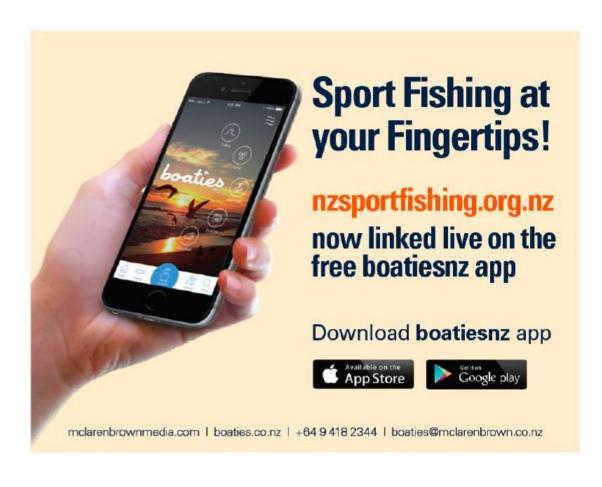

ASSIST HOOKS

Assist hooks are hooks that are attached to lures with leads typically constructed of multifilament, wire, monofilament or other similar material. Assist hooks have become wildly popular with vertical jigs and are also being increasingly used with plugs in place of traditional treble hooks.

Assist hooks or other such single hooks that are attached to a lure with a lead constructed of monofilament, multifilament, wire or other such material must conform to the following: When using assist hooks on any artificial lure, other than a skirted lure, the lead cannot be more than 1 ½ hook's length and the bend of the hook may not be more than 4 inches (101 mm), whichever is less, from the closest point of attachment on the lure. Double and treble hooks may not be used as assist hooks.

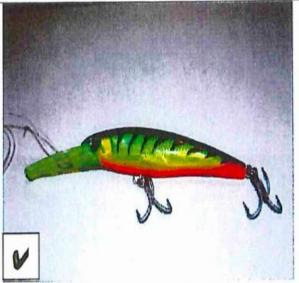

IGFA LEGAL OR ILLEGAL

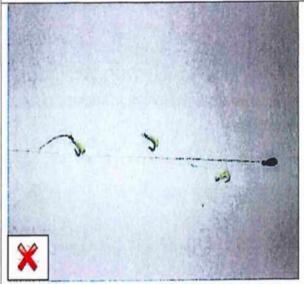

IGFA LEGAL OR ILLEGAL

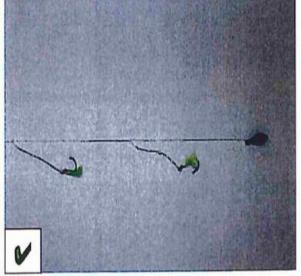

IGFA Illegal because the assist cords can only be 1½ times the hook length

IGFA Legal because "up to 3 Gang hooks are permitted when attached to plugs and other artificial lures that are specifically designed for this use.

IGFA Illegal because the ledger rig has more than 2 single hooks being used

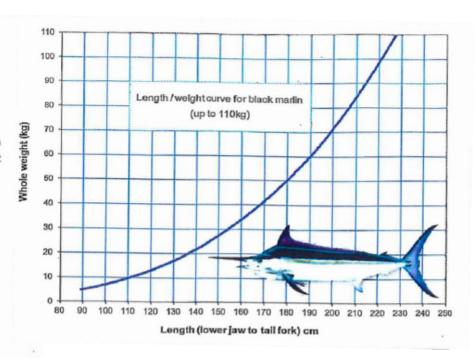

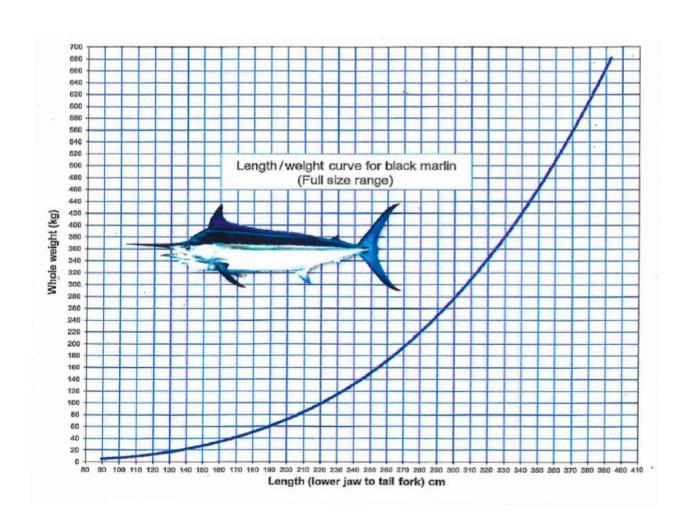

IGFA Legal because the ledger rig only has 2 single hooks being used

AND HOW BIG IS IT?

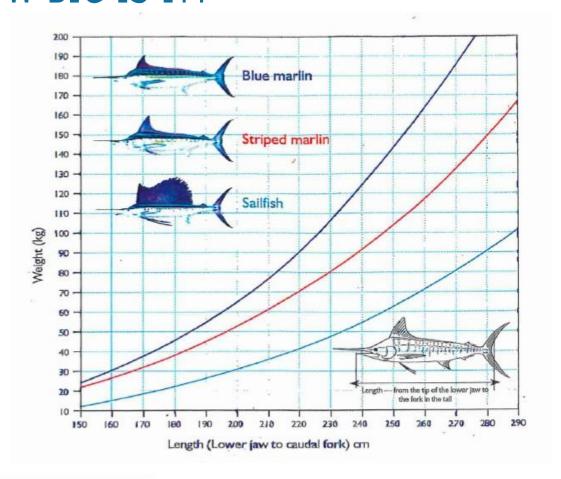

Estimating the size and weight of your catch is one of the more refined skills of a gamefisherman. It's especially important when practising tag-and-release as many of the important statistics flowing from tagging programs are influenced by your size and weight estimates.

Prepared by Dr Julian Pepperell, and illustrated by Craig Smith, here's a quick reference guide to help you more accurately determine the weights of striped, blue and black marlin, plus yellowfin tuna, tiger sharks and mako sharks.

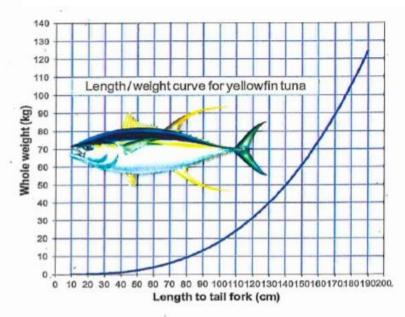

AND HOW BIG IS IT?

The above graph depicts average curves for blue marlin, striped marlin and sailfish in the more commonly caught size ranges. The length of the fish is measured from the tip of the lower jaw to the fork in the tail — the 'short length' used in record claims. In order to read these curves, draw a vertical line from the length of the fish to the curve, and from the intersection, draw a horizontal line to the weight axis. Please note that the black marlin length/weight relationship is nearly identical to blues.

The graph at right shows the length/weight relationship for yellowfin tuna. To determine the approximate weight of your fish, measure from the tip of the nose to the fork in the tall, then draw a vertical line on the graph from the length of the fish to the curve, and from that intersection, draw a horizontal line to the weight axis.

Length in cm & (inches)

Estimated weight in Kg

Estimated weight in Kg. These tables are based on a well documented formula and give a good estimation of gamefish weight.

The girth is the total distance around the fish - the line shown in yellow is half the girth. Formula applicable to marlin, tuna and sharks.

Add up to 10% for a well conditioned fish.

CHECK LIST FOR RECORDS

	Angler Master	Weigh Sec	Club	
CHECK IF CAUGHT WITHIN IGFA FISHING F	RULES & A	NGLING F	REGULATIO	ONS
CHECK SPECIES				
CHECK FOR MUTILATIONS (if any full explanations) Mutilation which could effect fighting capabilities will disqualify capture				
LINE: ONE PIECE 16.0 M Including double				
DOUBLE LENGTH OK Including knots, swivels, clips etc				-
LEADER LENGTH OK Including hook, lure etc				
HOOK ARRANGEMENT OK				
ROD & REEL OK AND MEASURED				
GAFFS CHECKED & MEASURED				
WEIGHING To nearest LOWER graduation NETT weight				
SCALE TEST CERTIFICATE OK AND ENCLOSED WITH CLAIM				
PHOTOS 1. Show full length of fish, dorsal fin, pectoral fins, tackle used & scales				
2. Shark's teeth				
3. Any unusual scars etc.				
 Lure if not included with claim Mark length on back of photo. 				
FISH IDENTIFICATION POSITIVE				
FEE ENCLOSED				

NOTE: CLAIM MUST REACH NZSFC WITHIN 60 DAYS OF CAPTURE

WORLD RECORD APPLICATION QUICK-CHECK LISTS

The following check list was designed to assist anglers in the record submittal process. Before submitting a world record application, anglers are encouraged to read the IGFA's International Angling Rules for a complete list of world record requirements and regulations.

The Catch

O The catch must have been made in accordance with the IGFA's International Angling Rules, which can be found on page 90 and are available in seven different languages online: https://igfa.org/Fish/INTERNATIONAL-ANGLING-RULES.aspx

Photo Documentation

The following photos are required for all World Record submissions:

- O Angler with the fish.
- O Rod and reel used to catch the fish.
- O Scale used to weight fish.
- O Fish being measured on the IGFA's Official Measuring Device (All-Tackle Length records only).
- Additional photos of fish that may pose some difficulty to identify (fins, teeth, etc.).
- *Videos can be used in place of photographs
- *Photos and videos for world records can be submitted via email to hq@igfa.org

Scales

- O The IGFA requires all potential world records to be weighed on a scale that has been certified within the past year.
- **O** If the scale has not been certified within the past year, it should be certified as quickly as possible after the weigh-in.
- *The IGFA can certify scales weighing up to 45 kg (100 lb) for a fee of \$40 USD.

Tackle

The following items are required for all world record submissions:

Conventional Tackle

- Full length of leader/trace including hooks, lures, etc. (if used).
- Full length of double line including knots, swivels, clips, etc. (if used).
- O Sample of main line (~15-meters/50 feet) immediately following the leader, double line, or hook/lure.
- O Sample(s) of backing (~15-meters/50 feet) (if used).

Fly Tackle

- O The full length of fly leader, including:
- O Shock tippet (including fly).
- O Class tippet.

Application

- Every applicable section of the record application must be completed.
- Contact information for witnesses to the catch and the weighing are required.
- Every application must be signed by the angler/guardian in the presence of a notary or acceptable substitute.

Read all IGFA angling rules and world record requirements before completing and signing this application. The angler's signature on the completed form must be witnessed by a notary. This application must be accompanied by line or tippet samples and photographs as specified in the World Records Requirements. Hybrids and other species that may pose a problem of identity should be examined by an ichthyologist or qualified fishery biologist. IGFA reserves the right to employ verification procedures such as polygraph tests to determine the authenticity of record claims. Materials submitted with application become property of IGFA and can be used at IGFA's discretion.
